KATA PENGANTAR

Penerbitan Penyiasatan Pengeluaran Padi (PPP), Musim Utama 2014/2015 kali ke 70 ini merupakan salah sebuah terbitan bersiri Jabatan Pertanian yang membekalkan maklumat padi yang lengkap. Maklumat yang disertakan merujuk kepada PPP untuk tempoh tanaman padi antara 1 Ogos 2014 hingga 28 Februari 2015 yang merangkumi Penyiasatan Hasil dan Penyiasatan Keluasan Aktiviti Tanaman Padi.

Laporan ini membekalkan maklumat tentang skop dan metodologi penyiasatan serta keputusan PPP untuk Padi Sawah dan Padi Huma di peringkat negeri dan nasional. Disamping itu, maklumat amalan kultura dan keputusan ujian pengeringan juga dipersembahkan.

Saya berharap penerbitan ini dapat memenuhi keperluan perancang, pembuat dasar, penyelidik dan juga pihak awam.

Saya ingin merakamkan penghargaan terima kasih kepada Urusetia PPP, Bahagian Perancangan, Teknologi Maklumat & Komunikasi, Bahagian Padi, Tanaman Industri dan Florikultur, Bahagian Pengurusan dan Pemuliharaan Sumber Tanah, Bahagian Biosekuriti Tumbuhan, Bahagian Pengembangan Pertanian dan Industri Asas Tani, Bahagian Kejuruteraan Pertanian, Bahagian Kawalan Kualiti Tanaman dari Jabatan Pertanian, semua Jabatan Pertanian Negeri, semua Jabatan Pengairan dan Saliran Negeri, MADA, KADA, IADA-IADA dan ahli Jawatankuasa PPP Peringkat Negeri dan Kebangsaan di atas sumbangan dan kerjasama mereka untuk membekalkan maklumat yang diperlukan serta penandatanganan laporan ini.

Jabatan Pertanian mengalu-alukan komen dan cadangan ke atas data yang dibentangkan untuk memperbaiki keluaran penerbitan ini yang akan datang.

DATO' AHMAD ZAKARIA BIN MOHAMAD SIDEK

Ketua Pengarah Pertanian

Jabatan Pertanian

Semenanjung Malaysia.

PREFACE

This publication on Paddy Production Survey (PPS), Main Season 2014/2015 is one of the several publications produced by the Department of Agriculture which provides comprehensive information on paddy. This issue is the 70th in the series of PPS publications. The information refers to PPS for the period of paddy planting between 1st August 2014 to 28th February 2015 which covers the Yield Survey and the Paddy Cultivation Activity Area Survey.

This report provides information on the scope and methodology of the survey and results of the PPS for Wetland Paddy and Dry land Paddy at the state and national levels. Besides this, information on farm practices and results of driage tests are also presented.

I hope this publication will fulfill the needs of planners, policy makers, researchers and also the public sector.

I would like to thank the Secretariat of the PPS, the Planning, Information Technology & Communications Division, the Paddy, Industrial Crops and Floriculture Division, the Soil Resource Management and Conservation Division, Plant Biosecurity Division, Agriculture Extension and Agro Based Industry Division, Agricultural Engineering Division, Crop Quality Control Division of the Department of Agriculture, all State Agriculture Departments, all State Drainage and Irrigation Departments, MADA, KADA, IADAs and members of the State and National Committees on PPS for their contributions and co-operations in the data collection and endorsement of this report.

The Department of Agriculture welcomes any comments and suggestions on the data presented for the improvement of future issues of this publication.

DATO' AHMAD ZAKARIA BIN MOHAMAD SIDEK

Director General of Agriculture

Department of Agriculture

Peninsular Malaysia.

<i>Table C14:</i>	<i>Average time of fertilizer given by type (DAS) granary area, Peninsular Malaysia, main Season 2014/2015</i>	
Jadual C15:	Purata penggunaan nutrien utama mengikut kawasan jelapang padi, Semenanjung Malaysia, Musim Utama 2014/2015	101
<i>Table C15:</i>	<i>Average major nutrients usage by granary area, Peninsular Malaysia, Main Season 2014/2015</i>	
D. Ujian Pengeringan/Driage Tests		
Jadual D1:	Sambutan ujian pengeringan mengikut negeri dan stesen pengeringan, Semenanjung Malaysia, Musim Utama 2014/2015	102
<i>Table D1:</i>	<i>Response of driage tests by state and driage station, Peninsular Malaysia, Main Season 2014/2015</i>	
Jadual D2:	Ujian pengeringan - Berat sampel padi basah, padi kering dan padi bersih mengikut negeri, Semenanjung Malaysia, Musim Utama 2014/2015	103
<i>Table D2:</i>	<i>Driage tests - Sample weights of wet paddy, dried paddy and cleaned paddy by state, Peninsular Malaysia, Main Season 2014/2015</i>	
Jadual D3:	Ujian pengeringan - Berat sampel padi basah, padi kering dan padi bersih mengikut kawasan jelapang padi, Semenanjung Malaysia, Musim Utama 2014/2015	104
<i>Table D3:</i>	<i>Driage tests - Sample weights of wet paddy, dried paddy and cleaned paddy by granary area, Peninsular Malaysia, Main Season 2014/2015</i>	
Jadual D4:	Ujian pengeringan - Berat sampel padi basah, padi kering dan padi bersih mengikut varieti padi, Semenanjung Malaysia, Musim Utama 2014/2015	105
<i>Table D4:</i>	<i>Driage tests - Sample weights of wet paddy, dried paddy and cleaned paddy by paddy variety, Peninsular Malaysia, Main Season 2014/2015</i>	
Jadual D5:	Faktor penukaran daripada purata hasil padi basah kepada purata hasil padi kering dan purata hasil padi bersih mengikut kelas padi, Semenanjung Malaysia, Musim Utama 2014/2015	106
<i>Table D5:</i>	<i>Conversion factor from average yield of wet paddy to average yield of dried paddy and average yield of cleaned paddy by paddy class, Peninsular Malaysia, Main Season 2014/2015</i>	

SENARAI LAMPIRAN
List of Appendices

Muka Surat
Page

Lampiran 1:	Keluasan bertanam, purata hasil padi bersih dan pengeluaran Padi Sawah dan Padi Huma (tanah tinggi dan tanah rendah) mengikut negeri, Malaysia, Musim Utama 2014/2015	109
<i>Appendix 1:</i>	<i>Planted area, average yield of cleaned paddy and paddy production of Wetland Paddy and Dryland Paddy (upland and lowland) by state, Malaysia, Main Season 2014/2015</i>	
Lampiran 2:	Keluasan bertanam, purata hasil padi bersih dan pengeluaran keseluruhan padi (Padi Sawah dan Padi Huma) mengikut negeri dan musim, Malaysia, 2014	110
<i>Appendix 2:</i>	<i>Planted area, average yield of cleaned paddy and overall paddy production (Wetland Paddy and Dryland Paddy) by state and season, Malaysia, 2014</i>	
Lampiran 3:	Keluasan bertanam, purata hasil padi bersih dan pengeluaran Padi Sawah mengikut negeri dan musim, Malaysia, 2014	111
<i>Appendix 3:</i>	<i>Planted area, average yield of cleaned paddy and production of Wetland Paddy by state and season, Malaysia, 2014</i>	
Lampiran 4:	Keluasan bertanam, purata hasil padi bersih dan pengeluaran Padi Huma (tanah tinggi dan tanah rendah) mengikut negeri dan musim, Malaysia, 2014	112
<i>Appendix 4:</i>	<i>Planted area, average yield of cleaned paddy and production of Dryland Paddy (upland and lowland) by state and season, Malaysia, 2014</i>	
Lampiran 5:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran keseluruhan padi (Padi Sawah dan Padi Huma), Malaysia, 2005 - 2015	113
<i>Appendix 5:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and overall paddy production (Wetland Paddy and Dryland Paddy), Malaysia, 2005 - 2015</i>	
Lampiran 6:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran Padi Sawah, Malaysia, 2005 - 2015	114
<i>Appendix 6:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of Wetland Paddy, Malaysia, 2005 - 2015</i>	
Lampiran 7:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran Padi Huma (tanah tinggi dan tanah rendah), Malaysia, 2005 - 2015	115
<i>Appendix 7:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of Dryland Paddy (upland and lowland), Malaysia, 2005 - 2015</i>	
Lampiran 8:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi huma (tanah tinggi dan tanah rendah), Sabah, 2005 - 2015	114
<i>Appendix 8:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of Dryland Paddy (upland and lowland), Sabah 2005 - 2015</i>	

Lampiran 9:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi huma (tanah tinggi dan tanah rendah), Sarawak, 2005 - 2015	117
<i>Appendix 9:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of Dryland Paddy (upland and lowland), Sarawak 2005 - 2015</i>	
Lampiran 10:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk keseluruhan kawasan jelapang padi, Semenanjung Malaysia, 2005 - 2015	118
<i>Appendix 10:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for overall granary area, Peninsular Malaysia, 2005 - 2015</i>	
Lampiran 11:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, MADA, 2005 - 2015	119
<i>Appendix 11:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, MADA, 2005 - 2015</i>	
Lampiran 12:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, KADA, 2005 - 2015	120
<i>Appendix 12:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, KADA, 2005- 2015</i>	
Lampiran 13:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA Kerian, 2005 - 2015	121
<i>Appendix 13:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA Kerian, 2005 - 2015</i>	
Lampiran 14:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA BLS, 2005 - 2015	122
<i>Appendix 14:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA BLS, 2005 - 2015</i>	
Lampiran 15:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA P. Pinang, 2005 - 2015	123
<i>Appendix 15:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA P. Pinang, 2005 - 2015</i>	
Lampiran 16:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA Seberang Perak, 2005 - 2015	124
<i>Appendix 16:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA Seberang Perak, 2005 - 2015</i>	

Lampiran 17:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA KETARA, 2005 - 2015	125
<i>Appendix 17:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA KETARA, 2005 - 2015</i>	
Lampiran 18:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA Kemasin Semerak, 2005 - 2015	126
<i>Appendix 18:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA Kemasin Semerak, 2005 - 2015</i>	
Lampiran 19:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA Pekan, 2005 - 2015	127
<i>Appendix 19:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA Pekan, 2005 - 2015</i>	
Lampiran 20:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi untuk kawasan jelapang padi, IADA Rompin, 2005 - 2015	128
<i>Appendix 20:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and paddy production for granary area, IADA Rompin, 2005 - 2015</i>	
Lampiran 21:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah, Semenanjung Malaysia, 2005 - 2015	129
<i>Appendix 21:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy, Peninsular Malaysia, 2005 - 2015</i>	
Lampiran 22:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Johor, 2005 - 2015	130
<i>Appendix 22:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Johor, 2005 - 2015</i>	
Lampiran 23:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Kedah, 2005 - 2015	131
<i>Appendix 23:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Kedah, 2005 - 2015</i>	
Lampiran 24:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Kelantan, 2005 - 2015	132
<i>Appendix 24:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Kelantan, 2005 - 2015</i>	
Lampiran 25:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Melaka, 2005 - 2015	133
<i>Appendix 25:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Melaka, 2005 - 2015</i>	

Lampiran 26:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Negeri Sembilan, 2005 - 2015	134
<i>Appendix 26:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Negeri Sembilan, 2005 - 2015</i>	
Lampiran 27:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Pahang, 2005 - 2015	135
<i>Appendix 27:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Pahang, 2005 - 2015</i>	
Lampiran 28:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Perak, 2005 - 2015	136
<i>Appendix 28:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Perak, 2005 - 2015</i>	
Lampiran 29:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Perlis, 2005 - 2015	137
<i>Appendix 29:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Perlis, 2005 - 2015</i>	
Lampiran 30:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Pulau Pinang, 2005 - 2015	138
<i>Appendix 30:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Pulau Pinang, 2005 - 2015</i>	
Lampiran 31:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Selangor, 2005 - 2015	139
<i>Appendix 31:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Selangor, 2005 - 2015</i>	
Lampiran 32:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah bagi negeri Terengganu, 2005 - 2015	140
<i>Appendix 32:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy for state of Terengganu, 2005 - 2015</i>	
Lampiran 33:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang), Semenanjung Malaysia, 2005 - 2015	141
<i>Appendix 33:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area), Peninsular Malaysia, 2005 - 2015</i>	
Lampiran 34:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Johor, 2005 - 2015	142
<i>Appendix 34:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Johor, 2005 - 2015</i>	

Lampiran 35:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Kedah, 2005 - 2015	143
<i>Appendix 35:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Kedah, 2005 - 2015</i>	
Lampiran 36:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Kelantan, 2005 - 2015	144
<i>Appendix 36:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Kelantan, 2005 - 2015</i>	
Lampiran 37:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Melaka, 2005 - 2015	145
<i>Appendix 37:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Melaka, 2005 - 2015</i>	
Lampiran 38:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Negeri Sembilan, 2005 - 2015	146
<i>Appendix 38:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Negeri Sembilan, 2005 - 2015</i>	
Lampiran 39:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Pahang, 2005 - 2015	147
<i>Appendix 39:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Pahang, 2005 - 2015</i>	
Lampiran 40:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Perak, 2005 - 2015	148
<i>Appendix 40:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Perak, 2005 - 2015</i>	
Lampiran 41:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Perlis, 2005 - 2015	149
<i>Appendix 41:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Perlis, 2005 - 2015</i>	

Lampiran 42:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Pulau Pinang, 2005 - 2015	150
<i>Appendix 42:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Pulau Pinang, 2005 - 2015</i>	
Lampiran 43:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Selangor, 2005 - 2015	151
<i>Appendix 43:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Selangor, 2005 - 2015</i>	
Lampiran 44:	Data Siri Masa - Keluasan bertanam, purata hasil padi bersih dan pengeluaran padi sawah (luar jelapang) bagi negeri Terengganu, 2005 - 2015	152
<i>Appendix 44:</i>	<i>Time series data - Planted area, average yield of cleaned paddy and production of wetland paddy (outside granary area) for state of Terengganu, 2005 - 2015</i>	
Lampiran 45:	Data Siri Masa - Keluasan pabel dan keluasan bertanam padi sawah (hektar) mengikut negeri, Semenanjung Malaysia, Musim Utama 2005 - 2015	153
<i>Appendix 45:</i>	<i>Time series data - Parcel and planted areas for wetland paddy (hectare) by state, Peninsular Malaysia, Main Season 2005 - 2015</i>	
Lampiran 46:	Data Siri Masa - Keluasan pabel dan keluasan bertanam padi sawah (hektar) mengikut kawasan jelapang padi, Semenanjung Malaysia, Musim Utama 2005 - 2015	154
<i>Appendix 46:</i>	<i>Time series data - Parcel and planted areas for wetland paddy (hectare) by granary area, Peninsular Malaysia, Main Season 2005 - 2015</i>	
Lampiran 47:	Penggunaan varieti padi mengikut musim utama, Semenanjung Malaysia, 2011 - 2015	155
<i>Appendix 47:</i>	<i>Usage of paddy varieties by Main Season, Peninsular Malaysia, 2011 - 2015</i>	
Lampiran 48:	Aliran faktor padi kering dan padi bersih serta peratus hampa mengikut negeri dan musim utama, Malaysia, 2012 - 2015	156
<i>Appendix 48:</i>	<i>Trend factors of dried paddy and cleaned paddy and percentage of unfilled grain by state and Main Season, Malaysia, 2012 - 2015</i>	
Lampiran 49:	Aliran faktor padi kering dan padi bersih serta peratus hampa mengikut kawasan jelapang padi dan musim utama, Semenanjung Malaysia, 2012 - 2015	157
<i>Appendix 49:</i>	<i>Trend factors of dried paddy and cleaned paddy and percentage of unfilled grain by granary area and Main Season, Peninsular Malaysia, 2012 - 2015</i>	

Lampiran 50:	Insiden serangan penyakit dan perosak, bencana, rumput serta padi rebah di lokasi persampelan mengikut negeri, Semenanjung Malaysia dan Sabah, Musim Utama 2014/2015	158
<i>Appendix 50:</i>	<i>Location of sample Incidents of Pest and diseases, Disaster, Weeds and Lodge by state, Peninsular Malaysia and Sabah, Main Season 2014/2015</i>	
Lampiran 51:	Insiden serangan penyakit dan perosak, bencana, rumput serta padi rebah di lokasi persampelan mengikut kawasan jelapang padi, Semenanjung Malaysia , Musim Utama 2014/2015	159
<i>Appendix 51:</i>	<i>Location of sample Incidents of Pest and diseases, Disaster, Weeds and Lodge by granary area, Peninsular Malaysia, Main Season 2014/2015</i>

CATATAN

Notes

**Catatan I: Catatan bagi jadual-jadual Penyiasatan Hasil
(Jadual B1, B2, B3 dan B4)**

1. Maksud simbol-simbol yang digunakan dalam jadual-jadual adalah seperti berikut:-
 - (a) Sampel tidak cukup untuk dibuat analisis
 - (b) Hasil didapati daripada luar skim pengairan sahaja
 - (c) Hasil didapati daripada skim pengairan sahaja
 - (d) Sampel tidak dipilih
 - (e) Sampel tiada sambutan
 - (-) Tidak diusahakan/tidak bertanam/tiada kawasan padi

2. Untuk mendapatkan purata hasil padi kering dan bersih, purata hasil padi basah dalam kg/ha didarabkan dengan faktor-faktor yang berkaitan bagi pelbagai kategori seperti berikut:-
 - (a) Negeri mengguna faktor di Jadual D2 (ruangan 4 dan 7, muka surat 103)
 - (b) Kawasan jelapang padi mengguna faktor di Jadual D3 (ruangan 4 dan 7, muka surat 104)
 - (c) Varieti padi mengguna faktor di Jadual D4 (ruangan 4 dan 7, muka surat 105)
 - (d) Kelas padi mengguna faktor di Jadual D5 (muka surat 106)

Catatan II: Catatan bagi jadual-jadual Penyiasatan Keluasan Aktiviti Tanaman Padi (Jadual B5, B6 dan B7)

1. Maksud simbol-simbol adalah seperti berikut:-
 - 0 Kawasan tidak bertanam padi
 - Tiada kawasan padi

2. KADA – Kawasan luar skim pengairan tetapi dibawah pentadbiran KADA telah dikeluarkan daripada kawasan jelapang padi KADA.

**Notes I: Notes for the Yield Survey tables
(Tables B1, B2, B3 and B4)**

1. *The meaning of the symbols used in the tables are as follows:-*
 - (a) *Not enough samples for analysis*
 - (b) *Yield is obtained from outside irrigation schemes only*
 - (c) *Yield is obtained from irrigation schemes only*
 - (d) *Sample is not selected*
 - (e) *Sample is non - response*
 - (-) *Not operated/not planted/no paddy areas*

2. *To obtain the average yield of dried and cleaned paddy, the average yield of wet paddy in kg/ha is multiplied with the relevant factors at various categories as follows:-*
 - (a) *States use factors listed in Table D2 (columns 4 and 7, page 103)*
 - (b) *Granary areas use factors listed in Table D3 (columns 4 and 7, page 104)*
 - (c) *Paddy varieties use factors listed in Table D4 (columns 4 and 7, page 105)*
 - (d) *Paddy class uses factors listed in Table D5 (page 106)*

**Notes II: Notes for the Paddy Cultivation Activity Area Survey tables
(Tables B5, B6, and B7)**

1. *The meaning of the symbols are as follows:-*
 - 0 *Area is not planted with paddy*
 - *No paddy areas*

2. *KADA - The hectarages outside irrigation schemes but under the KADA administration are excluded from the KADA granary areas.*

**CATATAN III: SENARAI VARIETI PADI YANG DIKTIRAF
OLEH MARDI SERTA TAHUN DIISYTIHAR DAN KELAS PADI**

**OBJEKTIF,
LIPUTAN, SKOP
DAN METODOLOGI**

OBJEKTIF, LIPUTAN, SKOP DAN METODOLOGI

1. OBJEKTIF

Objektif utama Penyiasatan Pengeluaran Padi (PPP) ialah untuk mengutip data padi dengan menggunakan kaedah-kaedah pensampelan kebarangkalian dan ukuran-ukuran objektif bagi mendapatkan anggaran hasil, keluasan bertanam dan pengeluaran padi untuk setiap musim. Anggaran ini dikeluarkan di peringkat daerah, negeri dan juga kawasan jelapang padi. Objektif lain penyiasatan ini adalah untuk mengumpul maklumat tambahan tentang amalan kultura berkaitan tanaman padi.

2. LIPUTAN PENYIASATAN

PPP dilaksanakan untuk seluruh negara. Pengukuran secara objektif yang digunakan untuk Penyiasatan Hasil di Semenanjung Malaysia, Sabah dan Sarawak adalah meliputi Padi Sawah sahaja. Penyiasatan ini dijalankan untuk padi Musim Utama dan Luar Musim bagi Semenanjung Malaysia manakala bagi Sabah dan Sarawak, penyiasatan ini dijalankan untuk padi Musim Utama sahaja. Lain-lain maklumat yang tidak diperoleh dari pengukuran objektif ini seperti data Padi Huma, data keluasan dan hasil diperoleh terus daripada Jabatan Pertanian Negeri yang berkenaan.

3. SKOP LAPORAN

- 3.1 Laporan ini diterbitkan mengikut **musim** dengan menggunakan tempoh tanaman padi sebagai rujukan. Laporan **Musim Utama** meliputi padi yang ditanam dalam tempoh antara 1hb Ogos bagi sesuatu tahun hingga 28hb / 29hb Februari tahun berikutnya dan Laporan **Luar Musim** meliputi tempoh tanaman padi antara 1hb Mac hingga 31hb Julai bagi sesuatu tahun.

Laporan ini merangkumi Padi Sawah dan Padi Huma dan meliputi negeri-negeri di Semenanjung Malaysia, Sabah dan Sarawak.

- 3.2 Keputusan yang dibentangkan dalam laporan ini adalah seperti berikut:-

- a) Kadar sambutan penyiasatan
- b) Penyiasatan Hasil
- c) Penyiasatan Keluasan Aktiviti Tanaman Padi
- d) Kadar penggunaan baja
- e) Varieti padi yang ditanam

- f) Cara menanam padi
- g) Ujian pengeringan

3.3 Laporan ini adalah berdasarkan kepada jadual-jadual yang disediakan. Analisis PPP dibuat mengikut beberapa peringkat seperti berikut:-

- a) Malaysia
- b) Semenanjung Malaysia
- c) Kawasan jelapang padi
- d) Negeri
- e) Daerah terpilih

Walaupun bagaimanapun, tidak semua data dibuat analisis mengikut aspek-aspek di atas kerana ia bergantung kepada kesesuaian jadual-jadual yang diterbitkan.

4. METODOLOGI

4.1 Kaedah Penyiasatan

Terdapat dua soal selidik yang berasingan digunakan dalam PPP, iaitu, soal selidik untuk Penyiasatan Keluasan Aktiviti Tanaman Padi dan soal selidik untuk Penyiasatan Hasil.

4.1.1 Mulai Musim Utama 1997/1998, Penyiasatan Keluasan mengalami perubahan dari segi kaedah pungutan data dan kandungan soal selidik. Penyiasatan Keluasan kini telah dinamakan Penyiasatan Keluasan Aktiviti Tanaman Padi dan dilaksanakan secara bancian bulanan di Semenanjung Malaysia. Untuk mendapatkan data, pegawai luar buat lawatan ke ladang dan menganggarkan keluasan tanaman padi mengikut aktiviti berpandukan blok-blok padi yang diwujudkan. Setiap blok padi dikenali sebagai Unit Keluasan Tiruan (UKT). Ia merangkumi lot-lot padi yang bersebelahan dalam sesuatu kawasan tertentu yang ditandakan di atas syit-syit kadestra dalam strata tersebut. Di antara data yang dikutip adalah anggaran keluasan bertanam, tuaian, serangan terlibat dan musnah dan keluasan bertanam mengikut varieti padi.

4.1.2 Bagi Sabah dan Sarawak, data Penyiasatan Keluasan Aktiviti Tanaman Padi diperoleh terus daripada Jabatan Pertanian Negeri masing-masing.

4.1.3 Dalam Penyiasatan Hasil, data hasil boleh diperoleh mengikut kaedah-kaedah seperti berikut:-

a) Kaedah Petak Ujian

Data hasil padi boleh diperoleh dengan mengukur berat padi yang dituai dari petak ujian yang berukuran seluas 5m x 4m dalam sebuah petak sawah padi yang dipilih secara rambang.

b) Kaedah Guni

Data hasil padi boleh diperoleh dengan mendarabkan jumlah bilangan guni padi dari setiap sampel lot dengan purata berat padi seguni dan dibahagi dengan keluasan petak sawah yang dituai.

c) Kaedah Pukal

Data hasil padi boleh diperoleh dari berat kasar padi dari resit bagi setiap sampel lot atau lot-lot yang terpilih dan dibahagi dengan keluasan petak sawah yang dituai.

4.1.4 Lain-lain maklumat sampingan yang dikutip adalah termasuk amalan-amalan berkaitan dengan penanaman padi, iaitu, taraf mekanisasi, varieti padi yang ditanam dan sebab-sebab kerosakan padi. Data tersebut dikutip secara subjektif dan digunakan terutama untuk tujuan suntingan dan semakan, khususnya apabila terdapat hasil-hasil yang dilaporkan terlalu rendah atau terlalu tinggi.

4.1.5 Kerja luar untuk penyiasatan ini dijalankan oleh berbagai agensi termasuk Jabatan Pertanian Negeri, Jabatan Pengairan dan Saliran (JPS) Negeri, MADA, KADA, IADA Kerian dan KETARA.

4.2 Rekabentuk Sampel

Rekabentuk sampel berperingkat berstrata telah digunakan dalam PPP. **Unit pensampelan tahap pertama** dikenali sebagai Unit Tanaman Tiruan (UTT) dalam Penyiasatan Hasil dan Unit Keluasan Tiruan (UKT) dalam Penyiasatan Keluasan Aktiviti Tanaman Padi. Setiap UTT atau UKT adalah terdiri daripada keluasan yang merangkumi lot-lot yang bersebelahan yang ditandakan di atas syit-syit kadestra dalam strata berkenaan. Unit_pensampelan **tahap kedua** adalah lot-lot padi dalam

UTT atau UKT terpilih. Unit_pensampelan **tahap ketiga** adalah petak-petak sawah yang terpilih dalam lot tersebut dan akhir sekali **tahap keempat** adalah satu petak ujian yang berukuran seluas 5m x 4m. Bagi kaedah guni dan pukal, hanya unit pensampelan tahap kedua diperlukan, iaitu, di peringkat lot.

Dalam pelaksanaan Penyiasatan Keluasan Aktiviti Tanaman Padi, semua peringkat unit pensampelan tahap pertama atau UKT dilawati.

Kawasan bertanam padi di Semenanjung Malaysia dikategorikan kepada dua strata utama, iaitu:-

Strata A : Kawasan-kawasan pengairan

Strata B : Kawasan-kawasan bukan pengairan

Strata A: Mengandungi unit pensampelan tahap pertama, iaitu, skim-skim pengairan kecil JPS dan lapan skim pengairan utama atau kawasan jelapang padi. Strata A dipecahkan lagi kepada tiga strata kecil berdasarkan keluasan pabel padi bagi setiap unit pensampelan tahap pertama, iaitu:-

- a) 0.4 - 201 ha
- b) 202 - 4,046 ha
- c) 4,047 ha dan lebih

Strata B: Unit pensampelan tahap pertama adalah terdiri daripada mukim yang menjadi unit pentadbiran dalam sesebuah daerah. Strata ini dipecahkan lagi kepada empat strata kecil berdasarkan keluasan pabel padi di mukim tersebut, iaitu:-

- a) 0.4 - 39 ha
- b) 40 - 201 ha
- c) 202 - 404 ha
- d) 405 ha dan lebih

Dalam Penyiasatan Hasil, peruntukan untuk unit sampel tahap pertama adalah mengikut nisbah keluasan pabel padi dalam setiap strata kecil dan tahap kedua adalah sampel yang dipilih, iaitu, lot padi yang berasaskan kaedah pilihan *Circular Systematic*.

4.3 Rangka Pensampelan

Rangka pensampelan yang juga rangka lot padi mengandungi senarai induk lot-lot

padi. Senarai induk yang diwujudkan mengandungi maklumat-maklumat berikut:-

- a) Nombor Lot
- b) Lokasi seperti Nombor Syit Kadestra, Mukim, Daerah dan Negeri
- c) Kawasan lot terdiri daripada:-
 - i) Kawasan paset padi
 - ii) Kawasan bukan paset padi
 - iii) Kawasan paset padi terbiar

4.4 Ralat Pensampelan

Oleh kerana Penyiasatan Hasil adalah satu penyiasatan berbentuk sampel, data yang dipersembahkan dalam laporan ini tertakluk kepada ralat pensampelan dan ralat bukan pensampelan.

Ralat bukan pensampelan merujuk kepada ralat yang terdapat dalam liputan, penggunaan konsep dan definisi, kesilapan mengukur, kesilapan pengiraan, dsb. Kesilapan ini dapat dikawal melalui latihan, pengawasan kerja luar dan penyuntingan soal selidik.

Ralat pensampelan dalam laporan ini dipersembahkan sebagai peratus Ralat Piawai Relatif (% R.P.R). Ralat Piawai ialah satu ukuran yang diperoleh daripada varian pensampelan yang menunjukkan sejauh mana sesuatu anggaran itu hampir kepada nilai yang dijangkakan (misalnya kadar hasil padi). Maka, Ralat Piawai mengukur **ketepatan** sesuatu anggaran dan bukan ketelitiannya yang menunjukkan sejauh mana hampirnya nilai anggaran kepada nilai yang sebenar. Nilai sebenar tidak diketahui kerana ianya hanya boleh diperoleh sekiranya banci dijalankan tanpa sebarang ralat bukan pensampelan yang disebutkan di atas. Perkara ini hendaklah diambil perhatian apabila menggunakan Ralat Piawai untuk mengulas keputusan-keputusan penyiasatan ini.

4.5 Kaedah Anggaran Hasil dan Keluasan

4.5.1 Purata hasil padi diperoleh berasaskan kawasan bertanam. Padi dalam petak terpilih dalam sampel (lot padi atau petak ujian) dituai dan hasil yang diperoleh ditimbang (kg) dan direkodkan sewajarnya. Teknik **purata mudah** digunakan untuk mendapatkan purata hasil padi dari sampel-sampel dan seterusnya teknik **purata wajar** digunakan untuk mendapat anggaran purata hasil padi pada peringkat strata, daerah, negeri dan Malaysia. Terdapat tiga jenis purata hasil padi yang dilaporkan dalam laporan ini, iaitu:-

- a) **Purata hasil padi basah** (kg/ha) ialah purata hasil padi semasa menuai.
- b) **Purata hasil padi kering** (kg/ha) ialah purata hasil padi selepas pengeringan yang mana kandungan kelembapan wap basah sekitar 14%.
- c) **Purata hasil padi bersih** (kg/ha) ialah purata hasil padi selepas pengeringan, dibersihkan dan apabila kandungan kelembapan wap basah tepat pada 14%.

4.5.2 Sebagaimana yang telah dijelaskan di para 4.1.1 di atas, keluasan bertanam padi di skim-skim pengairan dan luar pengairan telah dianggarkan secara bancian ke atas semua UKT yang aktif bertanam. Seterusnya data tersebut dikumpul untuk mendapat anggaran keluasan di peringkat strata kecil dan daerah.

Akhir sekali, anggaran padi yang ditanam di skim-skim pengairan dan luar pengairan dikumpul untuk mendapat data di peringkat daerah, negeri, Semenanjung Malaysia dan Malaysia.

5. KONSEP DAN DEFINISI

5.1 Skim Pengairan

Skim pengairan merujuk kepada projek pengairan yang telah **siap** (*completed*), **dijaya gunakan** (*commissioned*), **beroperasi** dan diisytiharkan oleh pihak berkuasa sebagai kawasan pengairan. Kebanyakan skim-skim ini dikendalikan oleh organisasi formal kerajaan seperti Jabatan Pengairan dan Saliran (JPS), MADA dan KADA. Hampir semua skim mempunyai sempadan yang diwartakan. Biasanya sempadan ini adalah sama dengan sempadan yang ditetapkan semasa projek tersebut pertama kali ditentukan. Terdapat beberapa skim pengairan yang diwartakan sebagai kawasan pengairan berdasarkan Akta Ordinan Pengairan 1953 (Pindaan 1989).

5.2 Luar Pengairan

Luar pengairan merujuk kepada kawasan yang bertanam padi tanpa sistem pengairan. Penanaman padi di kawasan ini pada lazimnya bergantung kepada air hujan.

5.3 Nama Skim

Ia merujuk kepada nama rasmi skim pengairan dan nama ini digunakan dalam semua urusan pentadbiran.

5.4 Kawasan Jelapang Padi

Kawasan jelapang padi merujuk kepada skim pengairan yang besar (lebih daripada 4,000 hektar) dan diiktiraf oleh kerajaan dalam Dasar Pertanian Negara sebagai kawasan utama pengeluaran padi. Terdapat sepuluh kawasan jelapang padi di Malaysia, iaitu, MADA, KADA, IADA Kerian, IADA BLS, IADA P. Pinang, IADA Seberang Perak, IADA KETARA, IADA Kemasin Semerak, IADA Pekan dan IADA Rompin.

5.5 Luar kawasan Jelapang Padi

Luar kawasan jelapang padi merujuk kepada kawasan-kawasan di skim-skim pengairan kecil dan kawasan-kawasan luar skim-skim pengairan.

5.6 Pasel Padi

Pasel padi adalah sekeping tanah yang pada kebiasaannya digunakan untuk penanaman padi. Pasel padi boleh dikelaskan sebagai berikut:-

- (a) Pasel Padi Aktif
- (b) Pasel Padi Pelbagai
- (c) Pasel Padi Terbiar

5.7 Pasel Padi Aktif

Ia merujuk kepada pasel padi yang lazimnya bertanam padi sekurang-kurangnya sekali dalam tempoh 3 tahun atau dalam 5 musim yang lepas.

5.8 Pasel Padi Pelbagai

Ia merujuk kepada pasel padi yang ditanam dengan tanaman kontan atau tanaman sementara seperti sayur-sayuran, jagung, pisang, tebu dan sebagainya.

5.9 Pasel Padi Terbiar

Pasel padi terbiar adalah pasel padi yang tiada aktiviti padi atau tanaman sementara lain (tidak diusahakan) selama 3 tahun yang lepas atau 5 musim atau lebih.

5.10 Lot

Lot adalah sekeping tanah yang telah diberi nombor, keluasan dan sempadan yang tertentu seperti yang ditetapkan oleh Jabatan Ukur dan Pemetaan. Butir-butir lot ini dicatatkan di syit kadestra atau dalam buku pendaftaran mukim atau *Key Plan* JPS.

5.11 Lot Padi

Lot padi adalah sekeping tanah dimana sebahagian atau keseluruhan paselnya digunakan untuk penanaman padi, samada sekali atau lebih dalam setahun tanpa mengambil kira syarat yang dinyatakan dalam geran tanah. Bagi setiap lot padi kemungkinan terdapat dua atau lebih tanaman dalam pasel yang ditanam. Oleh demikian, penentuan sesuatu lot padi tidak bergantung kepada syarat tanah yang dinyatakan tetapi kepada **kegunaan sebenar tanah tersebut**.

5.12 Tanah Tol

Tanah tol adalah sekeping tanah yang mempunyai sempadan yang tertentu. Sempadan ini adalah berdasarkan kepada pemilikan pengusaha atau penghuni secara sementara serta berkemungkinan membayar lesen tahunan. Biasanya tanah tol tidak mempunyai nombor lot atau keluasan di atas syit kadestra. Pengenalannya adalah berdasarkan kepada nombor surat hakmilik sementara dan nama pengusaha yang diperoleh daripada pejabat tanah.

5.13 Tanah Tol Padi

Tanah tol padi adalah sekeping tanah dimana sebahagian atau keseluruhan paselnya digunakan untuk penanaman padi samada ditanam sekali atau lebih dalam setahun.

5.14 Keluasan Kasar Skim

Keluasan kasar skim adalah termasuk bendang, jalan ladang, taliair, parit, struktur-struktur, kampung, dusun dan sebagainya.

5.15 Keluasan Bersih Skim

Keluasan bersih skim adalah keluasan keseluruhan pasel padi dalam skim, iaitu, keluasan kasar ditolak keluasan untuk jalan, taliair, parit, struktur, kampung, dusun dan sebagainya.

5.16 Musim Padi

Musim padi merujuk kepada aktiviti-aktiviti penanaman padi daripada penyediaan tanah sehingga penuaian.

5.17 Musim Utama

Musim utama adalah tempoh yang mana penanaman padi adalah yang paling sesuai berdasarkan iklim tempatan (musim hujan) dan tidak bergantung sepenuhnya kepada sistem pengairan. Untuk tujuan pentadbiran, Musim Utama ditakrifkan sebagai tempoh **bila padi ditanam** yang mana tarikh mula **ditanam*** jatuh antara **1hb Ogos hingga 28hb / 29hb Februari tahun berikutnya.**

5.18 Luar Musim

Luar musim adalah tempoh kering yang mana penanaman padi biasanya bergantung kepada sistem pengairan. Untuk tujuan pentadbiran, Luar Musim ditakrifkan sebagai tempoh **bila padi ditanam** yang mana tarikh mula **ditanam*** jatuh antara **1hb Mac hingga 31hb Julai dalam tahun berkenaan.**

5.19 Data Tahunan

Data tahunan padi merujuk kepada data yang dilaporkan untuk kedua-dua musim, iaitu, Musim Utama dan Luar Musim. Contohnya, data untuk tahun 2015 merujuk kepada Musim Utama 2014/2015 dan Luar Musim 2015. Konsep ini digunakan untuk purata hasil padi, keluasan bertanam dan anggaran pengeluaran padi.

* Definisi ditanam ialah menabur bagi sistem tabur terus dan mencedung bagi sistem semaian.

**LAPORAN
PENYIASATAN
PENGELUARAN PADI
MUSIM UTAMA 2014/2015**

LAPORAN PENYIASATAN PENGELUARAN PADI MUSIM UTAMA 2014/2015

1. PENDAHULUAN

Laporan ini memberi keputusan keseluruhan tentang Penyiasatan Pengeluaran Padi (PPP), Musim Utama 2014/2015 bagi padi yang ditanam di Malaysia. Musim Utama 2014/2015 merujuk kepada tempoh tanaman padi antara 1 Ogos 2014 hingga 28 Februari 2015.

2. KADAR SAMBUTAN

2.1 Penyiasatan Hasil

Kadar sambutan untuk PPP yang dijalankan di Semenanjung Malaysia bagi Musim Utama 2014/2015 adalah tinggi. Kadar sambutan untuk Penyiasatan Hasil ialah 100% yang mana kesemua 2,262 sampel telah memberi sambutan dan boleh dibuat analisis. (**Rujuk Jadual A1 – m. surat 46**).

Bagi negeri Sabah, kadar sambutan adalah 100%. Daripada jumlah 443 sampel yang memberi sambutan, 373 sampel (84.2%) telah dianalisis. 70 (15.8%) daripada sampel tidak boleh dibuat analisis (samada telah berubah tanaman, tertuai, lot padi tidak dapat dikesan atau lain-lain sebab) (**Rujuk Jadual A1 – m. surat 46**).

Bagi negeri Sarawak, kadar sambutan adalah 100%. Daripada jumlah 432 sampel yang memberi sambutan 431 sampel (99.8%) telah dianalisis manakala 1 sampel (0.2%) tidak boleh dibuat analisis (**Rujuk Jadual A1 – m. surat 46**).

Kadar sambutan di kawasan jelapang padi adalah 100% yang mana kesemua 1,591 sampel telah memberi sambutan dan boleh dibuat analisis (**Rujuk Jadual A2 – m. surat 47**).

2.2 Penyiasatan Keluasan Aktiviti Tanaman Padi

Mulai Musim Utama 1997/1998, Penyiasatan Keluasan Aktiviti Tanaman Padi telah dibuat secara bancian bulanan ke atas semua Unit Keluasan Tiruan (UKT) yang aktif bertanam di Semenanjung Malaysia. Pada Musim Utama 2014/2015, bilangan UKT yang dibanci adalah 411 bagi kawasan pengairan dan 144 bagi kawasan luar

pengairan. Di negeri Sabah dan Sarawak, Jabatan Pertanian Negeri berkenaan melapor keluasan bertanam mengikut kaedah masing-masing (**Rujuk Jadual B5 – m. surat 64**).

Jadual 1: Sampel Dirancang Dan Yang Beri Sambutan Mengikut Musim Utama, Semenanjung Malaysia, 2010 – 2015 (Penyiasatan Hasil)

Musim Utama	Bil. Sampel Dirancang	Sambutan	
		Bilangan	Peratusan
2009/2010	2,265	2,249	99
2010/2011	2,265	2,265	100
2011/2012	2,269	2,260	99
2012/2013	2,211	2,202	99
2013/2014	2,279	2,279	100
2014/2015	2,262	2,262	100

3. PERSEMBAHAN DATA

Mulai Musim Utama 1993/1994 beberapa perubahan telah dibuat dalam kandungan data yang dipersembahkan yang mana data berkaitan Padi Huma turut dimasukkan. Jadual-jadual ini meliputi data hasil, keluasan bertanam dan pengeluaran bagi **keseluruhan jenis padi, Padi Sawah dan Padi Huma**. Walaubagaimana pun, data terperinci berkaitan amalan kultura dan lain-lain maklumat yang ditunjukkan di Jadual A1 hingga Jadual D5 hanya merujuk kepada padi sawah sahaja.

Dalam jadual-jadual berkaitan hasil, purata hasil padi biasanya dilaporkan dalam tiga kategori, iaitu, purata hasil padi basah, purata hasil padi kering dan purata hasil padi bersih. Seperti yang diputuskan oleh Jawatankuasa PPP Peringkat Kebangsaan, data purata hasil padi yang disebut dalam laporan ini dan mana-mana agensi yang memohon data hasil adalah merujuk kepada padi bersih sahaja.

Untuk meningkatkan lagi kegunaan laporan ini, data siri masa juga disertakan sebagai Lampiran (**Lampiran 5 - m. surat 113 hingga Lampiran 44 - m. surat 152**).

4. KEPUTUSAN PENYIASATAN PENGELUARAN PADI

4.1 Keseluruhan Hasil Padi

Purata hasil padi bagi seluruh negara untuk Musim Utama 2014/2015 adalah 3,580 kg/ha menurun sebanyak 5.7% berbanding dengan 3,796 kg/ha Musim Utama 2013/2014. Keseluruhan keluasan bertanam padi ialah 415,628 ha, menurun sebanyak 0.15% daripada keluasan bertanam padi seluas 416,261 ha pada Musim Utama 2013/2014 (**Rujuk Jadual 2 – m. surat 13**).

Di Semenanjung Malaysia, purata hasil padi untuk musim ini adalah 4,364 kg/ha dengan keluasan bertanam padi 266,249 ha berbanding dengan 4,725 kg/ha dan keluasan bertanam 264,441 ha pada Musim Utama 2013/2014 (**Rujuk Jadual 2 – m. surat 13**).

Anggaran pengeluaran padi bagi semua negeri pada musim ini ialah 1.49 juta tan metrik. Pengeluaran dari Semenanjung Malaysia menyumbang sebanyak 78.0% (1.16 juta tan metrik) daripada pengeluaran padi negara manakala Sabah dan Sarawak menyumbang sebanyak 22.0% (0.3 juta tan metrik) (**Rujuk Jadual 2 – m. surat 13**).

Kawasan jelapang padi pula menyumbang sebanyak 82.3% (0.96 juta tan metrik) daripada jumlah pengeluaran padi di Semenanjung Malaysia (**Rujuk Jadual B17 – m. surat 84**).

4.2 Padi Sawah

Padi Sawah adalah jenis padi yang utama ditanam di Malaysia. Ia terdiri daripada berbagai varieti padi. Keseluruhan purata hasil Padi Sawah bagi Musim Utama 2014/2015 ialah 4,026 kg/ha dengan keluasan bertanam 353,201 ha berbanding 4,297 kg/ha dengan keluasan bertanam 352,729 ha pada musim yang sama tahun 2013/2014 (**Rujuk Jadual 2 – m. surat 13**).

Jadual 2: Purata Hasil, Keluasan Bertanam dan Pengeluaran Padi Mengikut Kawasan dan Musim Utama, Malaysia, 2013 - 2015

Kawasan	Musim Utama 2012/2013			Musim Utama 2013/2014			Musim Utama 2014/2015

4.2.1 Padi Sawah di Semenanjung Malaysia

Di Semenanjung Malaysia, purata hasil Padi Sawah adalah 4,364 kg/ha dengan keluasan bertanam 266,249 ha. Ini merupakan 75.4% dari jumlah keluasan yang bertanam Padi Sawah di Malaysia (**Rujuk Jadual 2 – m. surat 13**). Jumlah keseluruhan keluasan pabel padi yang didaftarkan di Semenanjung Malaysia adalah 291,086 ha yang mana 91.5% daripadanya telah ditanam padi pada musim ini (**Rujuk Jadual B5 – m. surat 64**).

Analisis taburan hasil menunjukkan 1,536 daripada keseluruhan sampel (67.9%) memperoleh purata hasil melebihi 4 tan/ha. Daripada jumlah ini, 20 sampel memperoleh purata hasil melebihi 8 tan/ha (**Rujuk Jadual B14 – m. surat 81**).

Di Semenanjung Malaysia, Padi Sawah ditanam di dua jenis sawah padi, iaitu, dalam skim pengairan dan luar skim pengairan. Pada musim ini, keluasan bertanam dalam skim pengairan ialah 239,009 ha dengan purata hasil 4,480 kg/ha manakala kawasan luar skim pengairan pula mencatatkan keluasan bertanam sebanyak 27,240 ha dengan purata hasil 3,343 kg/ha (**Rujuk Jadual B1–m. surat 48 dan Jadual B5 – m. surat 64**).

Analisis peringkat Semenanjung Malaysia mencatatkan penurunan purata hasil berbanding dengan Musim Utama 2013/2014 (**Jadual 3 – m. surat 15**). Negeri Selangor mencatatkan purata hasil yang paling tinggi iaitu 6,117 kg/ha dengan keluasan bertanam 19,057 ha manakala negeri yang memperoleh purata hasil yang paling rendah pada musim ini adalah Pahang dengan purata hasil sebanyak 3,706 kg/ha dan keluasan bertanam 7,453 ha (**Jadual 3 – m. surat 15**).

4.2.2 Padi Sawah di Sabah dan Sarawak

Purata hasil Padi Sawah di negeri Sabah bagi Musim Utama 2014/2015 ialah 3,521 kg/ha, meningkat sebanyak 0.3% berbanding dengan 3,512 kg/ha yang dicatat pada musim 2013/2014. Keluasan bertanam padi pada musim ini ialah 22,134 ha, menurun sebanyak 0.3% berbanding Musim Utama yang lepas (**Rujuk Jadual 2 – m. surat 13**).

Daripada jadual taburan hasil, 244 daripada keseluruhan sampel (65.4%) di negeri Sabah memperoleh purata hasil lebih daripada 4 tan/ha pada musim ini. Daripada jumlah ini, 29 sampel memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B14 – m. surat 81**).

Di negeri Sarawak, purata hasil Padi Sawah ialah 2,811 kg/ha, menurun sebanyak 1.3% berbanding dengan purata hasil sebanyak 2,848 kg/ha pada musim yang sama tahun 2013/2014. Keluasan bertanam padi ialah 64,818 ha menurun sebanyak 1.9% berbanding 66,089 ha pada Musim Utama yang lepas (**Rujuk Jadual 2 – m. surat 13**).

Jadual 3: Purata Hasil dan Keluasan Bertanam Padi Sawah Mengikut Negeri dan Musim Utama, Malaysia, 2013-2015

Negeri	Musim Utama 2012/2013		Musim Utama 2013/2014		Musim Utama 2014/2015	
	Hasil (Kg/Ha)	Keluasan (Ha)	Hasil (Kg/Ha)	Keluasan (Ha)	Hasil (Kg/Ha)	Keluasan (Ha)
JOHOR	3,955	1,525	4,493	1,555	3,926	1,540
KEDAH	3,669	104,205	4,809	106,329	4,063	107,276

SARAWAK	2,844	72,015	2,848	66,089	2,811	64,818
MALAYSIA	3,834	357,585	4,297	352,729	4,026	353,201

4.2.3 Padi Sawah di kawasan jelapang padi

Purata hasil padi di sepuluh kawasan jelapang padi ialah 4,687 kg/ha, menurun 9.4% berbanding dengan 5,171 kg/ha pada Musim Utama yang lalu. Keluasan bertanam padi dalam kawasan jelapang padi adalah 204,178 ha yang merupakan 77.2% daripada keseluruhan keluasan bertanam padi, 266,249 ha pada Musim Utama 2014/2015 di Semenanjung Malaysia. Keluasan jumlah bertanam padi musim ini meningkat sebanyak 0.6% berbanding dengan 202,877 ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 – m. surat 16**).

Analisis jadual taburan hasil menunjukkan 1,269 daripada 1,591 jumlah sampel mempunyai purata hasil lebih dari 4 tan sehektar yang mana 18 sampel memperoleh purata hasil melebihi 8 tan sehektar (**Rujuk Jadual B15 – m. surat 82**).

Enam daripada sepuluh kawasan jelapang padi mencatatkan peningkatan purata hasil padi berbanding dengan Musim Utama 2013/2014 kecuali bagi kawasan jelapang padi KADA, IADA Barat Laut Selangor, IADA Seberang Perak, dan IADA Ketara mencatatkan penurunan purata hasil. Berikut adalah ulasan bagi setiap kawasan jelapang padi:-

Jadual 4: Purata Hasil dan Keluasan Bertanam Padi Sawah Mengikut Kawasan Jelapang Padi dan Musim Utama, Semenanjung Malaysia, 2013-2015

Jelapang Padi	Musim Utama 2012/2013		Musim Utama 2013/2014		Musim Utama 2014/2015	
	Hasil (Kg/Ha)	Keluasan (Ha)	Hasil (Kg/Ha)	Keluasan (Ha)	Hasil (Kg/Ha)	Keluasan (Ha)
MADA	4,466	92,047	5,536	94,779	4,480	95,349
KADA	4,267	26,279	4,406	25,129	4,597	25,332
IADA KERIAN	4,335	20,983	4,396	20,972	4,500	20,972
IADA BLS	6,198	18,899	6,247	18,925	6,117	19,057
IADA P.PINANG	5,818	10,305	5,692	12,782	5,774	12,782
IADA SEBERANG PERAK	4,491	13,843	4,634	13,803	3,888	13,831
IADA KETARA	5,592	4,876	5,996	4,876	5,805	4,876
IADA KEMASIN SEMERAK	3,546	4,635	3,823	4,763	3,874	4,835
IADA PEKAN	-	-	2,338	4,323	2,737	4,561
IADA ROMPIN	-	-	3,586	2,525	5,972	2,583
Jumlah	4,676	191,867	5,171	202,877	4,687	204,178

i. MADA

Purata hasil padi di MADA ialah 4,480 kg/ha iaitu menurun sebanyak 19.1% berbanding 5,536 kg/ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 – m. surat 16**). Sebanyak 545 (80.7%) daripada keseluruhan sampel memperoleh purata hasil lebih daripada 4 tan sehektar dan daripada jumlah ini, 14 sampel memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Kawasan bertanam padi pada musim ini adalah 95,349 ha iaitu meningkat sebanyak 0.6% berbanding dengan 94,779 ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 - m. surat 16**).

ii. KADA

KADA mempunyai purata hasil padi sebanyak 4,597 kg/ha. Ia meningkat sebanyak 4.3% berbanding 4,406 kg/ha pada Musim Utama 2013/2014 (**Rujuk Jadual 4– m. surat 16**). Analisis taburan purata hasil menunjukkan 225 (82.4%) daripada sampelnya menghasilkan lebih dari 4 tan/ha dan 17 sampel memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Keluasan bertanam padi meningkat 0.8% kepada 25,332 ha berbanding dengan Musim Utama 2013/2014 yang lepas, iaitu, seluas 25,129 ha (**Rujuk Jadual 4 - m. surat 16**).

iii. IADA KERIAN

Purata hasil padi di kawasan IADA KERIAN adalah 4,500 kg/ha, meningkat 2.4% berbanding dengan purata hasil Musim Utama yang lepas, iaitu, 4,396 kg/ha. (**Rujuk Jadual 4 – m. surat 16**). Analisis taburan purata hasil menunjukkan bahawa 126 (80.8%) daripada sampelnya memperoleh lebih dari 4 tan/ha dan 4 sampel yang memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Keluasan bertanam padi musim ini ialah 20,972 ha sama seperti Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 – m. surat 16**).

iv. IADA Barat Laut Selangor

IADA Barat Laut Selangor memperoleh purata hasil padi sebanyak 6,117 kg/ha menurun sebanyak 2.1% berbanding dengan 6,247 kg/ha pada Musim Utama yang lepas (**Rujuk Jadual 4 – m. surat 16**). Terdapat 103 (93.6%) daripada sampel yang memperoleh purata hasil melebihi 4 tan/ha dan daripada jumlah ini, 15 sampel mencapai purata hasil melebihi 8 tan/ha (**Rujuk Jadual B15 - m. surat 82**). Keluasan bertanam padi meningkat 0.7% kepada 19,057 ha berbanding dengan Musim Utama 2013/2014 yang lepas, iaitu, seluas 18,925 ha (**Rujuk Jadual 4 – m. surat 16**).

v. IADA P. Pinang

IADA P. Pinang mendapat purata hasil sebanyak 5,774 kg/ha musim ini, meningkat 1.4% berbanding 5,692 kg/ha yang diperoleh pada Musim Utama yang lepas (**Rujuk Jadual 4 – m. surat 16**). Taburan purata hasil menunjukkan bahawa 111 (100.0%) sampel mempunyai purata hasil lebih daripada 4 tan/ha dan 37 sampel mencapai purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Keluasan

bertanam padi musim ini 12,782 ha sama seperti Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 - m. surat 16**).

vi. IADA Seberang Perak

IADA Seberang Perak memperoleh purata hasil padi sebanyak 3,888 kg/ha pada musim ini. Ia meningkat menurun 16.1% berbanding dengan purata hasil sebanyak 4,634 kg/ha pada Musim Utama 2013/2014 (**Rujuk Jadual 4 – m. surat 16**). Daripada taburan purata hasil, didapati bahawa 43 sampel (44.3%) mempunyai purata hasil lebih dari 4 tan/ha (**Rujuk Jadual B15 - m. surat 82**). Jumlah keluasan bertanam padi musim ini ialah 13,831 ha meningkat sebanyak 0.2% berbanding dengan 13,803 ha pada Musim Utama yang lepas (**Rujuk Jadual 4 - m. surat 16**).

Kawasan bertanam padi di projek Perak Tengah ini dibahagikan kepada blok, iaitu, Blok Awam dan Blok FELCRA. Purata hasil padi yang diperoleh daripada Blok Awam ialah 4,363 kg/ha dengan keluasan bertanam 3,021 ha manakala purata hasil di Blok FELCRA ialah 3,752 kg/ha dengan keluasan bertanam 5,199 ha. Bagi kawasan Hilir Perak memperolehi purata hasil padi sebanyak 3,757 kg/ha dengan keluasan bertanam 5,611 ha (**Rujuk Jadual B12 – m. surat 79**).

vii. IADA KETARA

IADA KETARA telah mengeluarkan purata hasil padi sebanyak 5,805 kg/ha, menurun 3.2% berbanding dengan purata hasil 5,996 kg/ha pada Musim Utama yang lepas (**Rujuk Jadual 4 – m. surat 16**). Daripada sampel yang dikaji, 61 sampel (100%) memperoleh purata hasil lebih 4 tan/ha dan daripada jumlah ini, 24 sampel mencapai purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Keluasan bertanam padi musim ini ialah 4,876 ha sama seperti Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 - m. surat 16**).

viii. IADA Kemasin Semerak

IADA Kemasin Semerak telah mengeluarkan purata hasil padi sebanyak 3,874 kg/ha pada musim ini. Ia meningkat sebanyak 1.3% daripada purata hasil Musim Utama yang lepas, iaitu, 3,823 kg/ha (**Rujuk Jadual 4 – m. surat 16**). Jadual taburan hasil menunjukkan 21 sampel (41.2%) mempunyai purata hasil lebih dari 4 tan/ha dan daripada jumlah ini, 2 sampel mencapai purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 - m. surat 82**). Jumlah keluasan yang bertanam padi ialah 4,835 ha,

meningkat 1.5% apabila dibandingkan dengan 4,763 ha yang ditanam pada Musim Utama 2013/2014 (**Rujuk Jadual 4 – m. surat 16**).

ix. IADA Pekan

Purata hasil padi di IADA Pekan ialah 2,737 kg/ha iaitu meningkat sebanyak 17.1% berbanding 2,338 kg/ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 – m. surat 16**). Sebanyak 22 (48.9%) daripada keseluruhan sampel memperoleh purata hasil lebih daripada 4 tan sehektar dan daripada jumlah ini, 6 sampel memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Kawasan bertanam padi pada musim ini adalah 4,561 ha iaitu meningkat sebanyak 5.5% berbanding dengan 4,323 ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 - m. surat 16**).

x. IADA Rompin

Purata hasil padi di IADA Rompin ialah 5,972 kg/ha iaitu meningkat sebanyak 66.5% berbanding 3,586 kg/ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 – m. surat 16**). Sebanyak 12 (100%) daripada keseluruhan sampel memperoleh purata hasil lebih daripada 4 tan sehektar dan daripada jumlah ini, 8 sampel memperoleh purata hasil melebihi 6 tan/ha (**Rujuk Jadual B15 – m. surat 82**). Kawasan bertanam padi pada musim ini adalah 2,583 ha iaitu meningkat sebanyak 2.3% berbanding dengan 2,525 ha pada Musim Utama 2013/2014 yang lepas (**Rujuk Jadual 4 - m. surat 16**).

4.3 Padi Huma

Padi Huma meliputi padi yang ditanam di tanah tinggi dan tanah rendah. Purata hasil Padi Huma di seluruh negara ialah 826 kg/ha dengan jumlah keluasan bertanam padi 62,427 ha. Padi jenis ini banyak ditanam di negeri Sarawak, iaitu, 56,322 ha dan di negeri Sabah seluas 6,105 ha. Padi Huma tidak ditanam di Semenanjung Malaysia pada musim ini (**Rujuk Jadual 2 – m. surat 13**).

5. KADAR PENGGUNAAN BENIH

Kadar purata penggunaan benih padi di Semenanjung Malaysia mengikut pelbagai kaedah menanam ialah 72 kg/ha – mencedung (manual), 76 kg/ha – mencedung

(transplanter), 138 kg/ha - tabur terus (sawah basah), 121 kg/ha - tabur terus (sawah kering) dan 142 kg/ha tabur terus dalam air (sawah berair) (**Rujuk Jadual C7 – m. surat 95**).

Di negeri Sabah, kadar penggunaan benih didapati adalah 79 kg/ha – mencedung (manual), 117 kg/ha - tabur terus (sawah basah) dan 130 kg/ha – tabur terus (sawah kering) (**Rujuk Jadual C7 – m. surat 95**).

Di kawasan jelapang padi, kadar purata penggunaan benih mengikut kaedah menanam ialah 74 kg/ha – mencedung (manual), 76 kg/ha – mencedung (transplanter), 143 kg/ha - tabur terus (sawah basah), 112 kg/ha – tabur terus (sawah kering) dan 145 kg/ha - tabur terus dalam air (sawah berair) (**Rujuk Jadual C8 – m. surat 96**).

6. TABURAN DAN POTENSI HASIL VARIETI PADI

Di Semenanjung Malaysia, tiga varieti padi yang disyorkan oleh MARDI kerap kali ditanam pada musim ini, iaitu, MR 220 CL2 (56.9%), MR 263 (17.9%) dan MR 219 (8.3%). Varieti-varieti lain juga ditanam oleh pesawah padi tetapi dalam peratusan yang kecil (**Rujuk Jadual C1 – m. surat 88-89**).

Di kawasan jelapang padi, peratusan varieti MR 220 CL2 telah melebihi varieti-varieti lain, iaitu, 64.7% diikuti dengan varieti - varieti MR 263 (17.9%), MR 269 (5.3%) dan MR 219 (5.0%). Varieti-varieti lain yang juga ditanam adalah dalam peratusan yang kecil (**Rujuk Jadual C2 – m. surat 90**).

Dari **Jadual C3 – m. surat 91**, daripada 8 varieti padi yang biasa ditanam, purata hasil bersih bagi MR 220 CL2 pada musim ini adalah 4,384 kg/ha manakala MR 220 CL1 sebanyak 4,486 kg/ha. Hasil tertinggi yang dicapai oleh MR 220 CL2 dan MR 269 adalah 9,655 kg/ha dan 8,979 kg/ha. Varieti padi yang biasa ditanam di negeri Sabah ialah TR8 (44.0%), Tempatan (37.3%), dan Sarawak (7.2%). Purata hasil padi basah yang diperolehi daripada varieti tersebut ialah 4,282 kg/ha, 4,116 kg/ha dan 4,226 kg/ha (**Rujuk Jadual C11 – m. surat 99**).

7. PENGGUNAAN MEKANISASI

Mengenai kegunaan mekanisasi untuk aktiviti tanaman padi di Semenanjung Malaysia, sebanyak 100% sampel mengguna mekanisasi untuk penyediaan sawah,

1.6% mencedung (transplanter), 84.3% menabur benih, 79.3% menabur baja, 87.6% meracun dan 100% menuai padi (**Rujuk Jadual C9 – m. surat 97**).

Di negeri Sabah, penggunaan mekanisasi adalah 66.8% untuk penyediaan sawah, dan 56.6% untuk menuai padi. Bagi lain-lain aktiviti, menabur benih sebanyak 51.7%, menabur baja 11.5% dan meracun 6.2% (**Rujuk Jadual C9 – m. surat 97**).

Di kawasan jelapang padi, penggunaan mekanisasi adalah 100% penyediaan sawah, 2.1% mencedung (transplanter), 90.2% menabur benih, 89.9% menabur baja, 94.4% meracun dan 100% menuai padi (**Rujuk Jadual C10 – m. surat 98**).

8. PENGGUNAAN BAJA

Soal selidik yang disemak semula dengan tujuan untuk mengutip maklumat tambahan penggunaan baja telah digunakan mulai Musim Utama 1999/2000 di lapan kawasan jelapang padi.

Kadar sambutan untuk penyiasatan penggunaan baja ialah 92.8% yang mana 1,476 sampel daripada 1,591 sampel telah dianalisis. Bagi Musim Utama 2014/2015, baja subsidi padi yang diberi kepada petani adalah dalam bentuk baja sebatian dan baja urea. Daripada jumlah 1,476 sampel yang dianalisis 100.0% mengguna baja sebatian kali pertama mengikut masa pemberian baja yang disyorkan iaitu pada purata 19 Hari Lepas Tabur (HLT) dengan purata kadar 209.0 kg/ha. Penggunaan sebanyak 320 (21.7%) sampel telah menjalankan pembajaan kali kedua baja sebatian pada purata 48 HLT dengan purata kadar 121.0 kg/ha. Bagi baja urea, 98.1 % sampel telah menjalankan pembajaan baja kali pertama pada 33 HLT dengan kadar 91.5 kg/ha, manakala 125 (8.5%) sampel telah menjalankan pembajaan baja urea kali kedua pada 46 HLT dengan kadar 58.4 kg/ha.

Manakala baja tambahan pula, sebanyak 1,236(83.7%) sampel telah melaksanakan pembajaan kali pertama pada 54 HLT dengan kadar 145.7 kg/ha. Baja organik pula hanya 392 (80.2%) sampel sahaja yang menjalankan pembajaan.

Disamping penggunaan baja bantuan, pesawah turut menggunakan baja tambahan yang dibeli sendiri. Terdapat 192 (13.0%) sampel telah menjalankan pembajaan bagi baja tambahan lain-lain pada 60 HLT dengan kadar 121.3 kg/ha, manakala 50 (3.4%) sampel telah menjalankan pembajaan baja tambahan kali kedua pada 59

HLT dengan kadar 79.4 kg/ha. (**Rujuk Jadual C12, C13 & C14 – m. surat 100,101 & 102**).

Kadar purata nutrien yang digunakan di semua kawasan jelapang padi ialah 112.1 kg/ha Nitrogen (N), 67.0 kg/ha Fosforus (P_2O_5) dan 66.3 kg/ha Kalium (K_2O). KADA menggunakan kadar purata nutrien yang tertinggi iaitu 189.36 kg/ha N, 146.50 kg/ha P_2O_5 dan 131.66 kg/ha K_2O diikuti IADA Ketara sebanyak 137.13 kg/ha N, 103.87 kg/ha P_2O_5 dan 85.06 kg/ha K_2O (**Rujuk Jadual C15 - m. surat 103**).

9. KEPUTUSAN UJIAN PENGERINGAN

9.1 Kadar Sambutan

Sejumlah 1,191 sampel telah dirancang untuk ujian pengeringan di Semenanjung Malaysia pada Musim Utama ini. Sebanyak 1,191 sampel (100%) telah dianalisis. Ujian pengeringan yang dilakukan di 12 stesen pengeringan adalah penting kerana keputusan-keputusan tersebut digunakan sebagai asas untuk menentukan faktor penukaran padi kering dan padi bersih yang akan digunakan dalam anggaran hasil (**Rujuk Jadual D1 – m. surat 104**).

9.2 Faktor Padi Kering dan Padi Bersih serta Peratusan Hampa

i. Semenanjung Malaysia

Satu sampel padi seberat 1 kg telah diambil dari sampel yang telah dipilih untuk ujian pengeringan. Berdasarkan keputusan ujian pengeringan yang dijalankan di stesen-stesen di seluruh Semenanjung Malaysia, purata berat padi kering dan purata berat padi bersih (pada tepat 14% Kandungan Wap Basah) diperoleh dari setiap negeri dan kawasan jelapang padi. Purata berat padi kering dan purata berat padi bersih digunakan sebagai faktor-faktor untuk menukar purata hasil padi basah kepada purata hasil padi kering dan purata hasil padi bersih di peringkat negeri, kawasan jelapang padi, kelas padi dan varieti utama. Purata berat padi kering dan purata berat padi bersih bagi Semenanjung Malaysia dihitung masing-masing sebanyak 0.884 dan 0.824 (**Rujuk Jadual D2 - m. surat 105**).

Aliran faktor-faktor padi kering dan padi bersih mengikut negeri dan kawasan jelapang padi masing-masing ditunjukkan di **Lampiran 48 dan Lampiran 49 – m. surat 156 dan 157**. Peratusan keseluruhan hampa musim ini ialah 8.6%, meningkat

jika dibanding dengan Musim Utama yang lalu sebanyak 6.2% (**Rujuk Lampiran 48 – m. surat 156**).

ii. Sabah

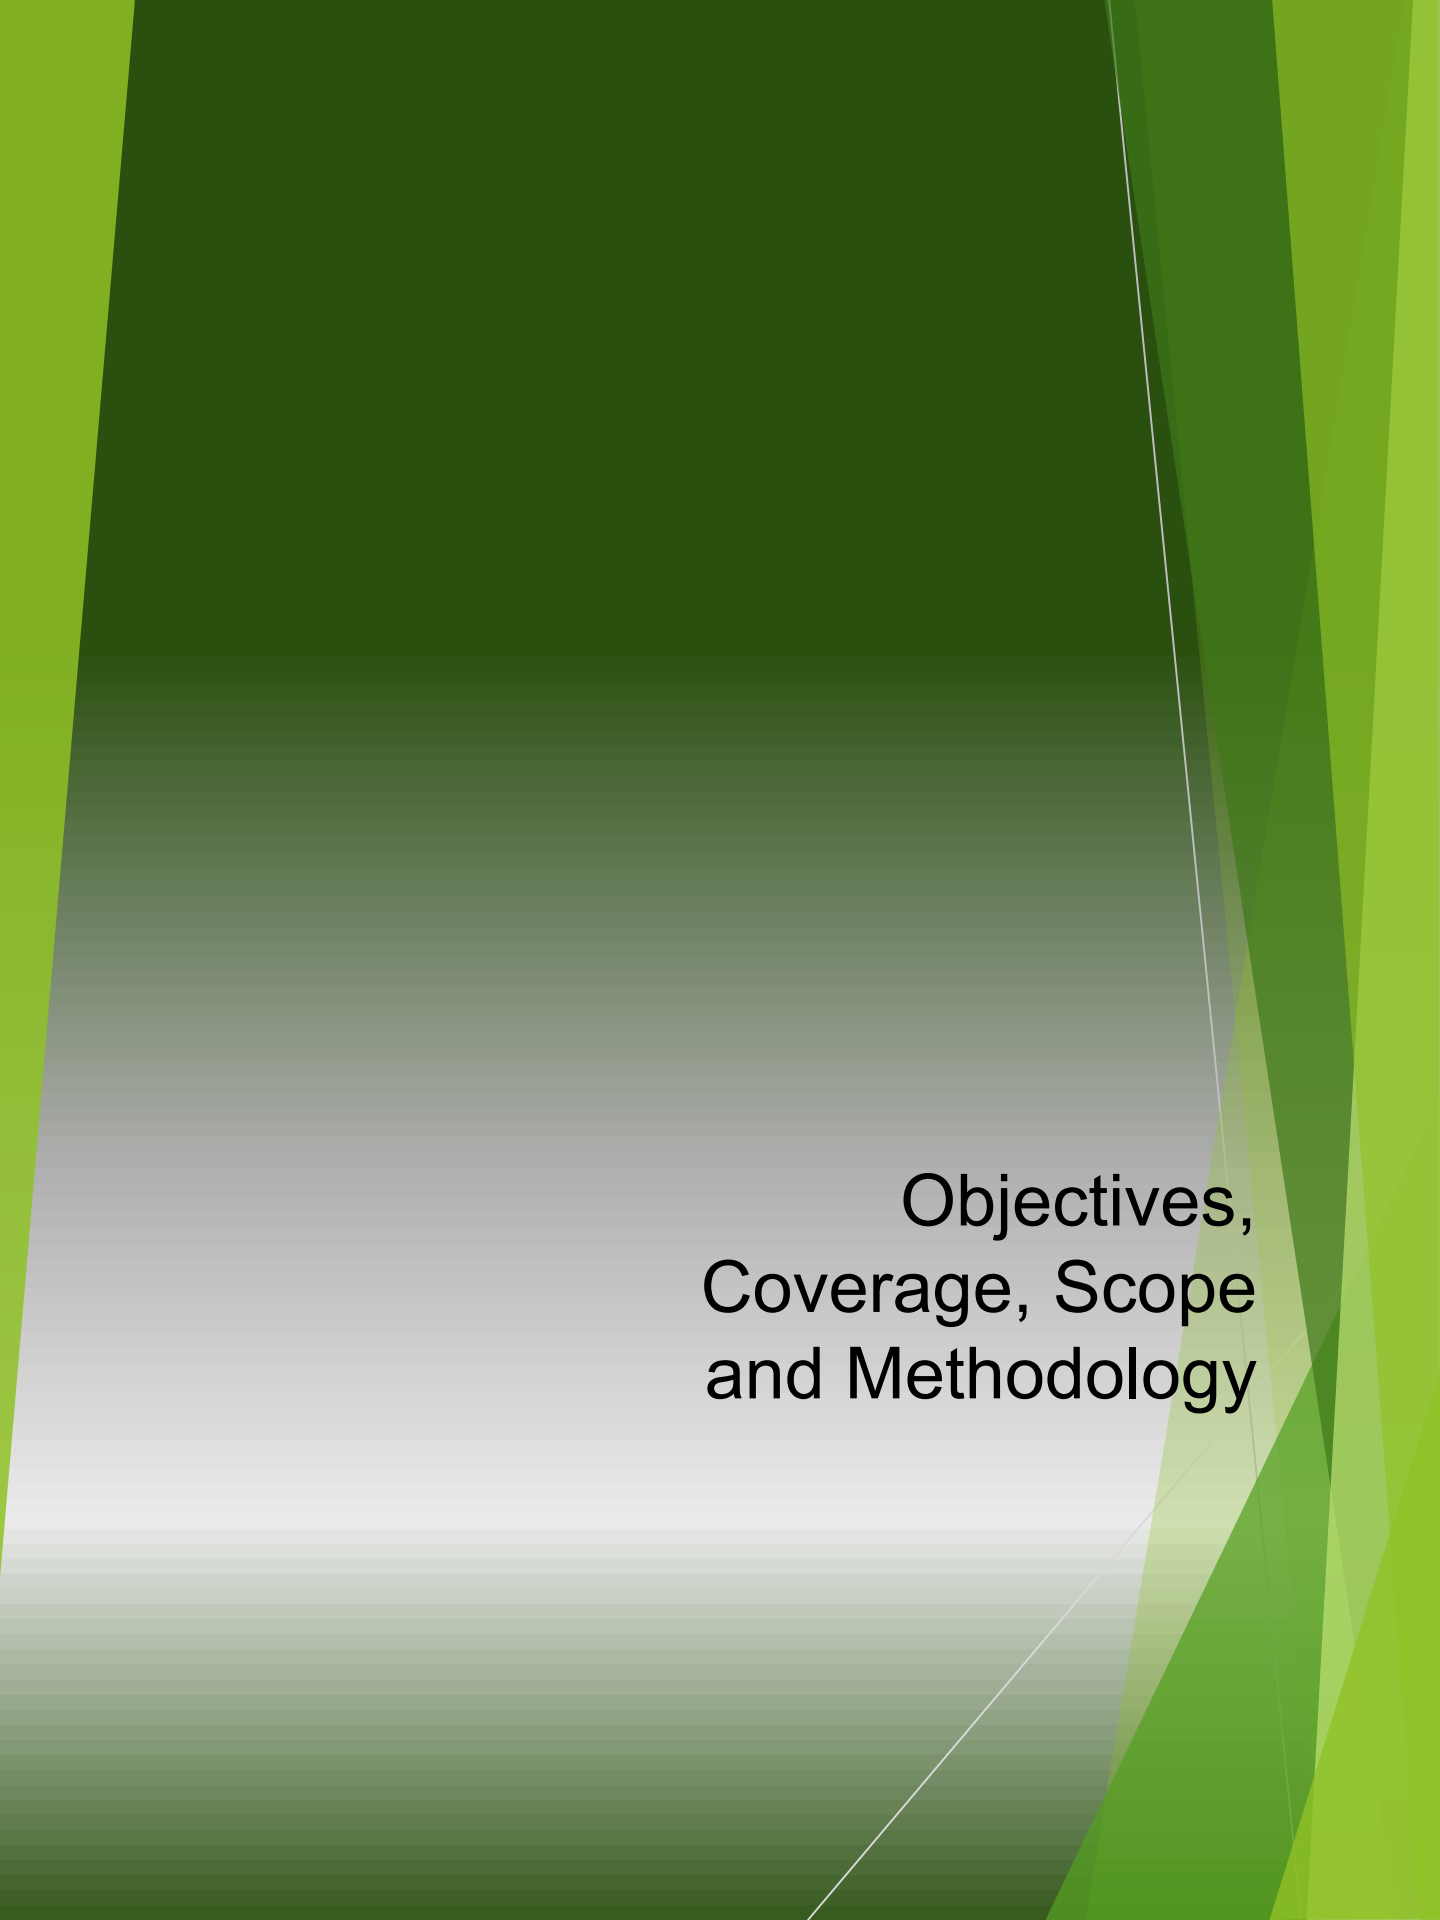

Bagi negeri Sabah, faktor padi kering dan padi basah bagi negeri Sabah iaitu 0.820 dan 0.750. Peratusan hampa bagi musim ini 8.4% (**Rujuk Lampiran 46 – m. surat 154**).

iii. Sarawak

Bagi negeri Sarawak, faktor padi kering dan bersih bagi negeri Sarawak iaitu 0.940 dan 0.881. Peratusan hampa bagi musim ini ialah 5.9% sama seperti Musim Utama 2013/2014 yang lepas (**Rujuk Lampiran 46 - m. surat 154**).

Objectives,
Coverage, Scope
and Methodology

OBJECTIVES, COVERAGE, SCOPE AND METHODOLOGY

1. OBJECTIVES

The primary objective of the Paddy Production Survey (PPS) is to collect paddy statistics using probability sampling methods and objective measurements to obtain estimates of yield, planted area and production for each season. These estimates are produced at the district, state and granary area levels. Another objective of the survey is to collect supplementary information on farm practices related to paddy cultivation.

2. COVERAGE OF THE SURVEY

PPS is carried out covering the whole nation. An objective measurement is used for the Yield Survey in Peninsular Malaysia, Sabah and Sarawak and is confined to Wetland Paddy only. The survey is conducted for paddy in the Main Season and the Off Season for Peninsular Malaysia while for Sabah and Sarawak, the survey is conducted for paddy in the Main Season only. Other information which are not obtained by the objective measurements such as data on Dryland Paddy, area and yield data are obtained directly from the Department of Agriculture of the states concerned.

3. SCOPE OF THE REPORT

- 3.1 *This report is published by **seasons** using the paddy planting period as reference. Report for the **Main Season** covers period for paddy planted between 1st August of a particular year to 28th / 29th February of the following year and Report for the **Off Season** covers period for paddy planted between 1st March to 31st July in a year.*

This report is confined to Wetland Paddy and Dryland Paddy and covers all states in Peninsular Malaysia, Sabah and Sarawak.

- 3.2 *The results presented in this report are as follows:-*

- a) *Survey response rate*
- b) *Yield Survey*
- c) *Paddy Cultivation Activity Area Survey*
- d) *Rate of fertilizer used*

- e) *Paddy varieties planted*
- f) *Paddy planting methods*
- g) *Drriage test*

3.3 *This report is based on the tables presented and analyses of the PPS are made at various levels, namely:-*

- a) *Malaysia*
- b) *Peninsular Malaysia*
- c) *Granary areas*
- d) *States*
- e) *Selected districts*

However, not all data are analysed based on the above aspects as they depend on the suitability of the tables published.

4. METHODOLOGY

4.1 Survey Method

There are two different types of questionnaires used in the PPS, namely questionnaire for the Paddy Cultivation Activity Area Survey and questionnaire for the Yield Survey.

4.1.1 *From the Main Season 1997/1998, changes were made in the Area Survey particularly in the method of data collection and contents of the questionnaire. The Area Survey is now named as Paddy Cultivation Activity Area Survey and is carried out as a monthly census in Peninsular Malaysia. To collect these data, field officers made field visits to the paddy fields and estimate the hectareage of paddy for each activity based on the paddy blocks created. Each paddy block is known as an Artificial Area Unit (AAU) which is made up of contiguous paddy lots in a defined area and marked on cadastral sheets within the strata. Among the data collected are estimates on area planted, harvested, affected and destroyed and area planted according to paddy varieties.*

4.1.2 *For Sabah and Sarawak, data on Paddy Cultivation Activity Area Survey are obtained directly from the respective State Department of Agriculture.*

4.1.3 For the Yield Survey, the yield data can be obtained by the following methods:-

a) **Paddy Plot Method**

The yield data for paddy can be obtained by measuring the weight of the paddy harvested from the paddy plot measured with an area of 5m x 4m in the selected paddy field determined at random.

b) **Gunny Method**

The yield data for paddy can be obtained by multiplying the total number of gunnies of paddy from the sample lot with the average weight of paddy per gunny and divide by the harvested paddy area.

c) **Bulk Handling Method**

The yield data for paddy can be obtained from the gross weight of paddy shown in the receipt for the selected sample lot or lots involved and divide by the harvested paddy area.

4.1.4 *Supplementary information collected includes farm practices related to paddy cultivation namely mechanisation status, paddy varieties planted and causes of damage of paddy. The above data are collected on a subjective basis and are used primarily for editing and verification purposes especially when very low or high yields are reported.*

4.1.5 *Field work in this survey is carried out by various agencies including the State Departments of Agriculture, State Departments of Drainage and Irrigation (DID), MADA, KADA, IADA Kerian and KETARA.*

4.2 **Sample Design**

*For PPS, a stratified multi-stage sample design is used. The **primary sampling unit** is termed as an Artificial Cropping Unit (ACU) in the Yield Survey and an Artificial Area Unit (AAU) in the Paddy Cultivation Activity Area Survey. Each ACU or AAU is made up of an area defined by a number of contiguous lots and is marked on cadastral sheets within the strata. The **second stage** sampling units are the paddy*

lots within the selected ACU or AAU. The **third stage** sampling units are the paddy fields selected within the lot and lastly, the **fourth stage** is the paddy plot measured with an area of 5m x 4m. For the gunny and the bulk handling methods, only the second stage sampling unit is needed, that is, at the lot basis.

During the implementation of the Paddy Cultivation Activity Area Survey, all levels of primary sampling units or AAUs were visited. Planted paddy areas in Peninsular Malaysia are categorised into two major strata, that is,

Stratum A: Irrigated Areas

Stratum B: Non-irrigated Areas

Stratum A: Comprises primary sampling unit, that is, DID minor irrigation schemes and eight major irrigation schemes also known as granary areas. Stratum A is again stratified into three smaller strata which are based on paddy parcel area for each primary sampling unit, that is:-

- a) 0.4 - 201 ha
- b) 202 - 4,046 ha
- c) 4,047 ha and above

Stratum B: The primary sampling unit comprises a mukim which is the administrative unit in a district. This stratum is again stratified into four smaller strata which are based on paddy parcel area in the mukim, that is:-

- a) 0.4 - 39 ha
- b) 40 - 201 ha
- c) 202 - 404 ha
- d) 405 ha and above

In the Yield Survey, the allocation for the primary sampling units is based on the ratio of paddy parcel area in each smaller stratum and the second stage is the sample selected which is the paddy lot based on the Circular Systematic selection method.

4.3 Sampling Frame

The sampling frame which is also the frame of paddy lots contains the master list of paddy lots. The master list developed contains the following information:-

- a) Lot number
- b) Location such as Cadastral Sheet Number, Mukim, District and State

- c) Lot area consists of:-
 - i) Paddy parcel area
 - ii) Non-paddy parcel area
 - iii) Idle paddy parcel area

4.4 Sampling Errors

Since the Yield Survey is a sample survey, the figures presented in the report are subject to both sampling and non-sampling errors.

Non-sampling errors refer to errors in coverage, application of concepts and definitions, measurement errors, computational errors, etc. These errors can be controlled to a large extent by training, supervision on field work and editing of questionnaires.

Sampling errors in this report are presented in terms of percentage Relative Standard Error (% R.S.E). The Standard Error is a measure derived from the sampling variance which shows the extent to which an estimate is near to its expected value (e.g. yield rate of paddy). Thus, Standard Error is said to measure the **precision** of an estimate and not its accuracy which refers to the closeness of the estimate to its true value. The true value is unknown since it can only be obtained if a census is conducted without any non-sampling errors mentioned above. This has to be borne in mind when using Standard Error to interpret the results of the survey.

4.5 Methods of Estimating Yield and Area

4.5.1 The average yield of paddy is derived based on planted area. Paddy within a selected plot in the sample (paddy lot or paddy plot) is harvested and the yield is measured, weighed (kg) and recorded accordingly. **Simple average** technique is used to calculate the average yield of paddy within the samples and subsequently **weighted average** technique is used to produce estimates of average yield of paddy at strata, districts, states and Malaysia levels. There are three types of average yields of paddy reported in this report, namely:-

- a) **Average yield of wet paddy** (kg/ha) is the average yield of paddy at harvest.
- b) **Average yield of dried paddy** (kg/ha) is the average yield of paddy after drying when the moisture content reaches about 14%.

- c) **Average yield of cleaned paddy** (kg/ha) is the average yield of paddy after drying, cleaning and when the moisture content is at exact 14%.

4.5.2 As explained in paragraph 4.1.1 above, the hectareage of paddy inside the irrigation and outside the irrigation schemes were estimated through the census on all active AAUs. Subsequently the data are compiled to obtain estimates for the small sized strata and districts.

Lastly, the estimates of paddy planted inside the irrigation and outside the irrigation schemes are compiled to obtain data for the districts, states, Peninsular Malaysia and Malaysia levels.

5. CONCEPTS AND DEFINITIONS

5.1 Irrigation Scheme

An irrigation scheme refers to an irrigation project which is **completed, commissioned, operated** and declared by the authority as an irrigation area. Most of these schemes are managed by formal government organisations such as Drainage and Irrigation Department (DID), MADA and KADA. Almost all schemes have gazetted boundaries. Very often this boundary is the same as the boundary stated when the project was first determined. There are a few irrigation schemes gazetted as irrigation areas based on the Irrigation Ordinance Act 1953 (Amended 1989).

5.2 Outside Irrigation

Outside irrigation refers to an area planted with paddy without any irrigation system. Mostly, paddy planting in the area depends on the supply of rain water (rainfed area).

5.3 Name of Scheme

This refers to the official name of an irrigation scheme and this name is used in all administrative matters.

5.4 Granary Area

Granary areas refer to major irrigation schemes (above 4,000 hectares) and are recognised by the government in the National Agriculture Policy as the main paddy producing areas. There are ten granary areas in Malaysia, namely, MADA, KADA, IADA Kerian, IADA BLS, IADA P. Pinang, IADA Seberang Perak, IADA KETARA, IADA Kemasin Semerak, IADA Pekan and IADA Rompin.

5.5 Outside Granary Area

Outside granary areas refer to areas in minor irrigation schemes and areas outside irrigation schemes.

5.6 Paddy Parcel

A paddy parcel is a piece of land which is usually used for planting paddy. Paddy parcel can be classified as follows:-

- (a) Active Paddy Parcel*
- (b) Miscellaneous Paddy Parcel*
- (c) Idle Paddy Parcel*

5.7 Active Paddy Parcel

This refers to paddy parcel which is normally planted with paddy at least once in the last 3 years or during the past 5 seasons.

5.8 Miscellaneous Paddy Parcel

This refers to paddy parcel which is planted with cash or temporary crops, e.g., vegetables, maize, banana, sugar cane etc.

5.9 Idle Paddy Parcel

An idle paddy parcel is one which has no paddy activities or other temporary crops (not operated on) for the past 3 years or 5 seasons or more.

5.10 Lot

A lot is a piece of land that has been given a number, measured area and boundaries as determined by the Surveyor and Mapping Department. Details of the lot are recorded in the cadastral sheet or in the mukim registration book or the Key Plan of DID.

5.11 Paddy Lot

*A paddy lot is a piece of land whereby a portion or the whole parcel is used for paddy planting irrespective whether it is planted once or more in a year without consideration of the conditions stated in the land grant. For each paddy lot there is a possibility of two crops or more in the planted parcel. Thus, the determination of paddy lot does not depend on the stated land conditions but instead on the **actual usage of land**.*

5.12 Toll Land

A toll land is a piece of land with a specified boundary. This boundary is based on the operator's ownership or occupants on a temporary basis and with a possibility of paying yearly license. Normally toll land does not have a lot number or measured area on the cadastral sheet. The identification is based on temporary ownership letter number and name of the operator which is obtained from the land office.

5.13 Paddy Toll Land

Paddy toll land is a piece of land where a portion or a whole parcel is used for paddy planting whether it is planted once or more in a year.

5.14 Gross Area of Scheme

The gross area of a scheme includes paddy fields, farm roads, irrigations, drainage, structures, villages, orchards etc.

5.15 Net Area of Scheme

This is the overall paddy parcel area in the scheme, i.e., the gross area minus the

area for roads, irrigations, drainage, structures, villages, orchards etc.

5.16 Paddy Season

Paddy season refers to the activities of paddy planting from the preparation of land to harvesting.

5.17 Main Season

*Main season is a period whereby paddy planting is very suitable based on local climate (rainy season) and does not depend totally on irrigation system. For administrative purposes, Main Season is defined as the period **when paddy is planted** in which the commence date of **planting*** falls between **1st August to 28th / 29th February of the following year.***

5.18 Off Season

*Off Season is a dry period and paddy planting normally depends on an irrigation system. For administrative purposes, Off Season is defined as the period **when paddy is planted** in which the commence date of **planting*** falls between **1st March to 31st July of the year.***

5.19 Yearly Data

Yearly data for paddy refers to data reported in both seasons, i.e., the Main Season and the Off Season. For example, data for 2014 refers to the Main Season 2013/2014 and the Off Season 2014. This concept applies to average yield of paddy, area planted and estimate of paddy production.

** Definition of planting is sowing for direct seeding system and transplanting for nursery system.*

Paddy Production Survey
Report
Main Season 2014/2015

PADDY PRODUCTION SURVEY REPORT

MAIN SEASON 2014/2015

1. INTRODUCTION

This report gives an overall result of the Paddy Production Survey (PPS), Main Season 2014/2015 for paddy planted in Malaysia. The Main Season 2014/2015 refers to the period of paddy planting between 1st August 2014 to 28th February 2015.

2. RESPONSE RATE

2.1 Yield Survey

*The response rate for the PPS carried out in Peninsular Malaysia during the Main Season 2014/2015 was height. The response rate for the Yield Survey was 100% with all 2,262 samples of those responded and could be analysed (**Refer to Table A1 - page 46**).*

*For the state of Sabah, the response rate was 100%. Out of a total of 443 samples that responded, 373 samples (84.2%) were analysed. The remaining 70 samples (15.8%) could not be analysed (either changed to other crops, was misharvested, paddy lots could not be located or due to other reasons) (**Refer to Table A1 - page 46**).*

*For the state of Sarawak, the response rate was 100%. Out of a total of 432 samples that responded, 431 samples (99.8%) were analysed and the remaining 1 samples (0.2%) could not be analysed (**Refer to Table A1 - page 46**).*

*For the granary areas, the response rate was 100% which all 1,591 samples of those responded and could be analysed this season (**Refer to Table A2 - page 47**).*

2.2 Paddy Cultivation Activity Area Survey

*From the Main Season 1997/1998, Paddy Cultivation Activity Area Survey is carried out on a monthly census basis for all active Artificial Area Units (AAU) in Peninsular Malaysia. During Main Season 2014/2015, the number of AAU's conducted for the census were 411 for areas with irrigation and 144 for areas outside irrigation. For the states of Sabah and Sarawak, the State's Department of Agriculture concerned reported the area planted based on their respective procedures (**Refer to Table B5 – page 64**).*

Table 1: Samples Planned And Responded By Main Season, Peninsular Malaysia, 2010 – 2015 (Yield Survey)

Main Season	No. of Samples Planned	Responded	
		Number	Percentage
2009/2010	2,265	2,249	99.
2010/2011	2,265	2,265	100
2011/2012	2,269	2,260	99
2012/2013	2,211	2,202	99
2013/2014	2,279	2,279	100
2014/2015	2,262	2,262	100

3. DATA PRESENTATION

Since the Main Season of 1993/1994, several changes were made in the data contents presented in which data on Dryland Paddy were also incorporated. These tables include data on yield, planted area and production for **all types of paddy, Wetland Paddy and Dryland Paddy**. However, the detail data regarding farm practices and other information shown in Table A1 to Table D5 refers to wetland paddy only.

In the tables regarding yield, the average yield of paddy were normally reported in three categories, i.e., average yield of wet paddy, average yield of dried paddy and average yield of cleaned paddy. As decided by the PPS Committee at the national level, the data on the average yield of paddy mentioned in this report as well as by other agencies requesting for data on yield will be based solely on cleaned paddy.

To further improve the usefulness of this report, time series data are also included as Appendices (**Appendix 5 – page 113 to Appendix 44 – page 152**).

4. RESULTS OF PADDY PRODUCTION SURVEY

4.1 Overall Yield of Paddy

The average yield of paddy at national level for the Main Season 2014/2015 was 3,580 kg/ha, decreased by 6.2% compared to 3,796 kg/ha during the Main Season 2013/2014. The overall planted paddy area was 415,628 ha, a decreased by 0.15% from 416,261 ha planted during the Main Season 2013/2014 (Refer to Table 2 – page 36).

For Peninsular Malaysia, the average yield of paddy for this season was 4,364 kg/ha with a paddy planted area of 266,249 ha compared to 4,725 kg/ha planted on 264,441 ha during the Main Season 2013/2014 (Refer to Table 2 – page 36).

The estimated paddy production for all states during this season was 1.49 million metric tonnes. The production from Peninsular Malaysia contributed 78.0% (1.16 million metric tonnes) to the overall national paddy production while Sabah and Sarawak contributed 22.0% (0.3 million metric tonnes) (Refer to Table 2 – page 36).

The contribution by the granary areas was 82.3% (0.96 million metric tonnes) of the total paddy production in Peninsular Malaysia (Refer to Table B17 – page 84).

4.2 Wetland Paddy

Wetland Paddy is the primary paddy type planted in Malaysia. It comprises of different paddy varieties. The overall average yield of Wetland Paddy during the Main Season 2014/2015 was 4,026 kg/ha with 353,201 ha of planted area compared to 4,297 kg/ha with a planted area of 352,729 ha in the same period of 2013/2014 (Refer to Table 2- page 36).

4.2.1 Wetland Paddy in Peninsular Malaysia

The average yield of Wetland Paddy in Peninsular Malaysia was 4,364 kg/ha with a planted area of 266,249 ha. This accounted for 75.4% of the total planted area of Wetland Paddy in Malaysia (Refer to Table 2 – page 36). The total paddy parcel area registered in Peninsular Malaysia was 291,086 ha, of which 91.5% was planted this season (Refer to Table B5 – page 64).

An analysis of the yield distribution reveals that 1,536 of the total samples (67.9%) show an average yield of more than 4 tonnes/ha. Of this, 20 samples had an average yield of more than 8 tonnes/ha (Refer to Table B14 – page 81).

Table 2: Average Yield, Planted Area and Paddy Production by Region and Main Seasons, Malaysia, 2013 - 2015

Region	Main Season 2012/2013			Main Season 2013/2014			Main Season 2014/2015		
	Yield (Kg/Ha)	Area (Ha)	Production (Metric Tonnes)	Yield (Kg/Ha)	Area (Ha)	Production (Metric Tonnes)	Yield (Kg/Ha)	Area (Ha)	Production (Metric Tonnes)
Pen. Malaysia	4,148	262,761	1,089,814	4,725	264,441	1,249,422	4,364	266,249	1,161,964
i) Wetland Paddy	4,148	262,761	1,089,814	4,725	264,441	1,249,422	4,364	266,249	1,161,964
ii) Dryland Paddy	-	-	-	-	-	-	-	-	-
Sabah	3,126	28,763	89,908	3,344	28,633	95,740	3,086	28,239	87,142
i) Wetland Paddy	3,348	22,809	76,354	3,512	22,199	77,969	3,521	22,134	77,928
ii) Dryland Paddy	2,277	5,954	13,554	2,762	6,434	17,771	1,509	6,105	9,214
Sarawak	1,886	133,836	252,394	1,908	123,187	235,094	1,972	121,140	238,928
i) Wetland Paddy	2,844	72,015	204,811	2,848	66,089	188,221	2,811	64,818	182,203
ii) Dryland Paddy	770	61,821	47,583	758	57,098	43,296	752	56,322	42,370
Malaysia	3,367	425,360	1,432,116	3,796	416,261	1,580,256	3,580	415,628	1,488,034
i) Wetland Paddy	3,834	357,585	1,370,979	4,297	352,729	1,515,612	4,026	353,201	1,422,095
ii) Dryland Paddy	902	67,775	61,137	961	63,532	61,067	826	62,427	51,584

In Peninsular Malaysia, Wetland Paddy is cultivated in two types of paddy fields, i.e. inside irrigation schemes and outside irrigation schemes. During this season, 239,009 ha inside irrigation schemes were planted giving an average yield of 4,480 kg/ha while 27,240 ha were planted outside irrigation schemes with an average yield of 3,343 kg/ha (Refer to Table B1 - page 48 and Table B5 - page 64).

An analysis of Peninsular Malaysia shows a lower average yield of the previous Main Season 2013/2014 (Refer to Table 3 - page 37). The state of Selangor recorded the highest average yield of 6,117 kg/ha with a planted hectareage of 19,057 ha while the state with the lowest average yield during this season was Pahang with an average yield of 3,706 kg/ha on a planted area of 7,453 ha (Refer to Table 3 – page 37).

4.2.2 Wetland Paddy in Sabah and Sarawak

The average yield of Wetland Paddy in Sabah for the Main Season 2014/2015 was 3,521 kg/ha, an increase of 0.3% compared to 3,512 kg/ha recorded in the same period of 2013/2014. The paddy planted area during this season was 22,134 ha, a decreased by 0.3% when compared to the previous Main Season (Refer to Table 2 - page 36).

Table 3: Average Yield and Planted Area of Wetland Paddy by State and Main Seasons, Malaysia, 2013 - 2015

State	Main Season 2012/2013		Main Season 2013/2014		Main Season 2014/2015	
	Yield (Kg/Ha)	Area (Ha)	Yield (Kg/Ha)	Area (Ha)	Yield (Kg/Ha)	Area (Ha)
JOHOR	3,955	1,525	4,493	1,555	3,926	1,540
KEDAH	3,669	104,205	4,809	106,329	4,063	107,276
KELANTAN	3,833	40,746	3,967	39,546	3,985	39,999
MELAKA	4,048	1,424	3,577	1,238	4,026	1,353
N. SEMBILAN	4,426	1,062	4,554	1,160	4,143	1,100
PAHANG	2,688	5,955	2,756	7,343	3,706	7,453
PERAK	4,312	41,030	4,383	40,961	4,170	40,822
PERLIS	4,459	26,031	5,058	26,059	4,468	26,029
P. PINANG	5,582	12,782	5,692	12,782	5,774	12,782
SELANGOR	6,198	18,899	6,247	18,925	6,117	19,057
TERENGGANU	4,101	9,102	4,911	8,543	5,220	8,838
PEN. MALAYSIA	4,148	262,761	4,725	264,441	4,364	266,249
SABAH	3,348	22,809	3,512	22,199	3,521	22,134
SARAWAK	2,844	72,015	2,848	66,089	2,811	64,818
MALAYSIA	3,834	357,585	4,297	352,729	4,026	353,201

From the yield distribution table, 244 of the total samples (65.4%) in Sabah had an average yield of more than 4 tonnes/ha during this season. Of this, 29 samples had an average yield of more than 6 tonnes/ha (Refer to Table B14 - page 81).

For the state of Sarawak, the average yield of Wetland Paddy was 2,811 kg/ha, a decreased by 1.3% compared to the average yield of 2,848 kg/ha during the same period

of 2013/2014. The paddy planted area was 64,818 ha, a decreased by 1.9% compared to 66,089 ha in the previous Main Season (**Refer to Table 2 - page 36**).

4.2.3 Wetland Paddy in granary areas

The average yield of paddy in the ten granary areas was 4,687 kg/ha, a decreased by 9.4% over the previous Main Season's yield of 5,171 kg/ha. A total of 204,178 ha in the granary areas were planted with paddy, accounting for 77.2% of the total paddy hectareage planted, 266,249 ha in Peninsular Malaysia during the Main Season 2014/2015. This season's total paddy hectareage had an increase of 0.6% compared to 202,877 ha planted in the previous Main Season 2013/2014 (**Refer to Table 4 - page 39**).

An analysis of the yield distribution table reveals that 1,269 of 1,591 samples had an average yield of more than 4 tonnes/ha and of this, 18 samples had obtained an average yield of more than 8 tonnes/ha (**Refer to Table B15 - page 82**).

Six of the ten granary areas had recorded a higher average yield of paddy compared to the Main Season 2013/2014 except in the granary area of KADA, IADA Barat Laut Selangor, IADA Seberang Perak, and IADA Ketara. The following are comments for each of the granary areas:-

i. MADA

The average yield of paddy in MADA is 4,480 kg/ha, a decreased by 0.6% compared to 5,536 kg/ha of the previous Main Season 2013/2014 (**Refer to Table 4 – page 39**). A total of 545 (80.7%) samples had an average yield of more than 4 tonnes/ha and of this, 14 samples had an average yield of more than 6 tonnes/ha (**Refer to Table B15 – page 82**). The paddy planted area during this season was 95,349 ha, an increase of 0.6% compared to 94,779 ha during the previous Main Season 2013/2014 (**Refer to Table 4 - page 39**).

ii. KADA

KADA had an average yield of 4,597 kg/ha of paddy, an increase of 4.3% when compared to 4,406 kg/ha of the Main Season 2013/2014 (**Refer to Table 4 – page 39**). The average yield distribution analysis shows that 225 (82.4%) of the samples had a yield of more than 4 tonnes/ha and 17 samples with an average yield above 6 tonnes/ha (**Refer to Table B15 – page 82**). The area planted with paddy, a decreased by 0.8% to 25,332 ha when compared to the previous Main Season 2013/2014 of 25,129 ha (**Refer to Table 4 - page 39**).

Table 4: Average Yield and Planted Area of Wetland Paddy by Granary Area and Main Season, Peninsular Malaysia, 2013-2015

Granary Area	Main Season 2012/2013		Main Season 2013/2014		Main Season 2014/2015	
	Yield (Kg/Ha)	Area (Ha)	Yield (Kg/Ha)	Area (Ha)	Yield (Kg/Ha)	Area (Ha)
MADA	4,466	92,047	5,536	94,779	4,480	95,349
KADA	4,267	26,279	4,406	25,129	4,597	25,332
IADA KERIAN	4,335	20,983	4,396	20,972	4,500	20,972
IADA BLS	6,198	18,899	6,247	18,925	6,117	19,057
IADA P. PINANG	5,818	10,305	5,692	12,782	5,774	12,782
IADA SEBERANG PERAK	4,491	13,843	4,634	13,803	3,888	13,831
IADA KETARA	5,592	4,876	5,996	4,876	5,805	4,876
IADA KEMASIN SEMERAK	3,546	4,635	3,823	4,763	3,874	4,835
IADA PEKAN	-	-	2,338	4,323	2,737	4,561
IADA ROMPIN	-	-	3,586	2,525	5,972	2,583
Total	4,676	191,867	5,171	202,877	4,687	204,178

iii. IADA KERIAN

The average yield of paddy in IADA KERIAN was 4,500 kg/ha, an increase of 2.4% when compared to the previous Main Season's average yield of 4,396 kg/ha (Refer to Table 4 – page 39). An analysis of the average yield distribution shows that 126 (80.8%) of the samples had achieved more than 4 tonnes/ha and 4 samples with an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The paddy planted area during this season was 20,972 ha same as the previous Main Season 2013/2014 (Refer to Table 4 - page 39).

iv. IADA Barat Laut Selangor

IADA BLS had an average yield of 6,117 kg/ha of paddy, a decreased by 2.1% when compared to 6,247 kg/ha of the previous Main Season (Refer to Table 4 – page 39). It was found that 103 (93.6%) of the samples had an average yield of more than 4 tonnes/ha and of this, 15 samples had an average yield of more than 8 tonnes/ha (Refer to Table B15 – page 82). The area planted with paddy, an increase of 0.7% to 19,057 ha when compared to the previous Main Season 2013/2014 of 18,925 ha (Refer to Table 4 - page 39).

v. IADA P. Pinang

IADA P. Pinang had an average yield of 5,774 kg/ha of paddy this season, an increase of 1.4% compared to 5,692 kg/ha achieved during the previous Main Season (Refer to Table 4 – page 39). The average yield distribution reveals that 111 (100.0%) samples had an average yield of more than 4 tonnes/ha and of this, 37 samples had an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The paddy planted area during this season was 12,782 ha same as the previous Main Season 2013/2014 (Refer to Table 4 - page 39).

vi. IADA Seberang Perak

IADA Seberang Perak had achieved an average yield of 3,888 kg/ha of paddy this season. A decreased by of 16.1% when compared to the average yield of 4,634 kg/ha in the Main Season 2013/2014 (Refer to Table 4 – page 39). From the average yield distribution, it was shown that 43 (44.3%) of the samples had an average yield of more than 4 tonnes/ha (Refer to Table B15 – page 82). The total area planted with paddy this season was 13,831 ha, an increase of 0.2% compared to the previous Main Season's figure of 13,803 ha (Refer to Table 4 - page 39).

The paddy planting area in this Perak Tengah project is split into blocks, i.e., Block by the Public and Block by FELCRA. An average paddy yield of 4,363 kg/ha was produced in the Block by the Public with a planted area of 3,021 ha while in the Block by FELCRA, the average yield attained was 3,752 kg/ha with a planted area of 5,199 ha. Hilir Perak planting area, had an average yield of 3,757 kg/ha with a planted area of 5,611 ha (Refer to Table B12 - page 79).

vii. IADA KETARA

IADA KETARA had produced an average yield of 5,805 kg/ha of paddy, a decreased by 3.2% over the previous main season's average yields of 5,996 kg/ha (Refer to Table 4 – page 39). From the samples surveyed, 61 (100%) samples had obtained an average yield of more than 4 tonnes/ha and of this, 24 samples that had an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The paddy planted area this season was 4,876 ha, same as the previous Main Season 2013/2014 (Refer to Table 4 - page 39).

viii. IADA Kemasin Semerak

An average paddy yield of 3,874 kg/ha was produced by IADA Kemasin Semerak this season, an increase of 1.36% to the previous Main Season's average yield of 3,823 kg/ha (Refer to Table 4 – page 39). The average yield distribution table shows that 21 samples (49.0%) had an average yield of more than 4 tonnes/ha and of this, 2 samples that had an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The total planted paddy area was 4,835 ha, an increase of 1.5% when compared to 4,763 ha planted during the Main Season 2013/2014 (Refer to Table 4 - page 39).

ix. IADA Pekan

The average yield of paddy in IADA Pekan is 2,737 kg/ha, an increase of 17.1% compared to 2,338 kg/ha of the previous Main Season 2013/2014 (Refer to Table 4 – page 39). A total of 22 (48.9%) samples had an average yield of more than 4 tonnes/ha and of this, 6 samples had an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The paddy planted area during this season was 4,561 ha, an increase of 5.5% compared to 4,323 ha during the previous Main Season 2013/2014 (Refer to Table 4 - page 39).

x. IADA Rompin

The average yield of paddy in IADA Rompin is 5,972 kg/ha, an increase of 66.5% compared to 3,586 kg/ha of the previous Main Season 2013/2014 (Refer to Table 4 – page 39). A total of 12 (100%) samples had an average yield of more than 4 tonnes/ha and of this, 8 samples had an average yield of more than 6 tonnes/ha (Refer to Table B15 – page 82). The paddy planted area during this season was 2,583 ha, an increase of 2.3% compared to 2,525 ha during the previous Main Season 2013/2014 (Refer to Table 4 - page 39).

4.3 Dryland Paddy

The Dryland Paddy includes those planted in the highland and lowland. At the national level, the average yield of Dryland Paddy was 826 kg/ha with a total planted area of 62,427 ha. This type of paddy is commonly planted in Sarawak with an area of 56,322 ha and Sabah with an area of 6,105 ha. Dryland Paddy was not planted in Peninsular Malaysia this season (Refer to Table 2 – page 36).

5. SEEDING RATE

The average seeding rates of paddy in Peninsular Malaysia by various methods of planting were 72 kg/ha – manual, 76 kg/ha - transplanter, 138 kg/ha - broadcasting (puddled field), 121 kg/ha - broadcasting (dry field) and 142 kg/ha broadcasting in water field (Refer to Table C7 - page 95).

In the state of Sabah, it was found that the average seeding rates were 79 kg/ha – manual, 117 kg/ha - broadcasting (puddled field) and 130 kg/ha - broadcasting (dry field) (Refer to Table C7 - page 95).

In the granary areas, the average seeding rates according to the methods of planting were 74 kg/ha – manual, 76 kg/ha - transplanter, 143 kg/ha - broadcasting (puddled field), 112 kg/ha - broadcasting (dry field) and 145 kg/ha – broadcasting in water field (Refer to Table C8 - page 96).

6. DISTRIBUTION AND POTENTIAL YIELD OF PADDY VARIETIES

In Peninsular Malaysia, three paddy varieties recommended by MARDI were frequently planted during this season, i.e., MR 220 CL2 (56.9%), MR 263 (17.9%), MR 219 (8.3%). Other varieties were also planted by paddy farmers but were in small percentages (Refer to Table C1 – page 88-89).

In the granary areas, the percentage of variety MR 220 CL2 had exceeded other varieties, i.e., 64.7% followed by varieties MR 263 (17.9%), MR 269 (5.3%) and MR 219 (5.0%). Other varieties that were also planted were in small percentages (Refer to Table C2 – page 90).

It is seen in Table C3 – page 91, from the 8 most popular paddy varieties planted, the average yield of cleaned paddy MR 220 CL2 this season was 4,384 kg/ha while MR 220 CL1 produced 4,486 kg/ha. The highest yield attained by MR 220 CL2 and MR 269 were 9,655 kg/ha and 8,979 kg/ha respectively. For the state of Sabah, the popular paddy varieties planted were TR8 (44.0%), Tempatan (37.3%) and Sarawak (7.2%). The average yield of wet paddy obtained from that variety was 4,282 kg/ha, 4,116 kg/ha and 4,226 kg/ha (Refer to Table C11 – page 99).

7. MECHANISATION

In respect of machines usage in paddy planting activities in Peninsular Malaysia, 100% of the samples had mechanised their activities during land preparation, 1.6% transplanter, 84.3% seed sowing, 79.3% manuring, 87.6% chemical spraying and 100% paddy harvesting (Refer to Table C9 – page 97).

For the state of Sabah, the usage of machines in land preparation was 66.8% and paddy harvesting 56.6%. For other activities, seed sowing was 51.7%, manuring 11.5% and chemical spraying 6.2% (Refer to Table C9 – page 97).

In the granary areas, mechanisation in land preparation was 100%, 2.1% transplanter, 90.2% seed sowing, 89.9% manuring, 94.4% chemical spraying and 100% paddy harvesting (Refer to Table C10, page 98).

8. FERTILIZER USAGE

A revised questionnaire with additional information has been used to collect data on fertilizer usage beginning the Main Season of 1999/2000 at eight granary areas.

The response rate for the fertilizer usage survey was 92.8% with 1,476 samples out of 1,591 samples were analysed. For Main Season 2014/2015, farmers receive subsidies fertilizers in the form of complex fertilizer as well as single fertilizers namely urea. The total 1,476 samples analyzed, 100.0% used first application of complex fertilizer according to the recommended time at an average of 19 Days After Sowing (DAS) with average rate of 209.0 kg/ha. A total of 320(21.7%) samples applied second application of complex fertilizer at an average of 48 DAS and at the average rate of 121.0 kg/ha. In the first application of urea fertilizer, 98.1% samples applied at the average rate of 91.5 kg/ha and an average of 33 DAS, while 125(8.5%) samples applied second application urea fertilizer at a rate of 58.4 kg/ha and an average rate of 46 DAS.

For the additional fertilizer, a total of 1,236(83.7%) samples used first application of additional fertilizer at 54 DAS and at the rate of 145.7 kg/ha. A total of 392(80.2%) samples applied fertilizer application organic fertilizer.

Besides fertilizer subsidies, farmers also used additional fertilizers purchased. Of the total 192(13.0%) samples applied of others additional fertilizer at the rate of 121.3 kg/ha and an average of 60 DAS, while 50(3.4%) samples applied second application urea fertilizer at a rate of 79.4 kg/ha and an average rate of 59 DAS. (Refer to Table C12, C13 & C14 – page 100, 101 & 102).

The average rate of nutrients used in all granary areas were 112.1 kg/ha of Nitrogen (N), 67.0 kg/ha of Phosphorous (P_2O_5) and 66.3 kg/ha of Potassium (K_2O). The highest rate used was recorded in KADA followed by IADA Ketara, that is, at 189.36 kg/ha N, 146.50 kg/ha P_2O_5 and 131.66 kg/ha K_2O and 137.13 kg/ha N, 103.87 kg/ha P_2O_5 and 85.06 kg/ha K_2O respectively (Refer to Table C15 – page 103).

9. RESULTS OF DRIAGE TESTS

9.1 Response Rate

A total of 1,191 samples were planned for the driage tests in Peninsular Malaysia during this Main Season. 1,191 samples (100%) were analysed. The driage tests conducted at the 12 stations are important as the results formed the bases of determining the conversion factors of dried and cleaned paddy which are then used in estimating the yield (Refer to Table D1 –page 104).

9.2 Dried Paddy and Cleaned Paddy Factors and Percentage of Unfilled Grain

i. Peninsular Malaysia

A sample of 1kg of paddy from the selected samples was taken and used for the driage tests. Based on the results of these driage tests conducted in stations throughout Peninsular Malaysia, the average dried weight of paddy and the average cleaned weight of paddy (at exact 14% Moisture Content) were obtained from the respective states and granary areas. The average dried weight and the average cleaned weight were used as factors to convert the average yield of wet paddy to the average yields of dried and cleaned paddy at the state, granary areas, paddy class and main variety levels. The average dried weight and the average cleaned weight for Peninsular Malaysia were calculated to be 0.884 and 0.824 respectively (Refer to Table D2 - page 105).

The trend for the factors of dried and cleaned paddy by state and granary areas are shown in Appendices 48 and 49 - pages 156 and 157 respectively. The percentage of overall unfilled grain this season was 8.6%, an increase of when compared to the previous Main Season's percentage of 6.2% (Refer to Appendix 48 – page 156).

ii. Sabah

For the state of Sabah the factors of dried and cleaned paddy of Sabah are 0.820 and 0.750 for this season. The percentage of unfilled grain this season 8.4% (Refer to Appendix 46 – page 154).

iii. Sarawak

For the state of Sarawak, the factor for dried and cleaned paddy are 0.940 and 0.881. The percentage of unfilled grain this season was 5.9% same as the previous Main Season 2013/2014 (Refer to Appendix 46 – page 154).
